ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to avail myself of this opportunity to express my sincere gratitude to those who have offered me help, care and support in the course of writing this thesis.

First, I'd like to show my heartfelt thanks to my supervisor who constantly gives me detailed instructions, invaluable suggestions and critical comments. Without the kindhearted support and professional instruction, this thesis would not have been possible. Besides, I also want to extend my sincere thanks to my supervisor once again for the diligence and consciousness teaching qualities that make me benefit a lot.

Second, I also want to extend my hearty thanks to all respectable teachers and professors in the School of Business in Xi'an International Studies University, whose enlightenment will always be treasured from the bottom of my heart.

Third, I am deeply grateful to my family members for their persistent love and encouragement. There's a still a long way to go in order to repay them as soon as possible. I will work hard in the days ahead and never let them down.

Last but not least, my sincere thanks also go to all my friends and classmates who always stand by my side and give me a lot of guidance on my thesis.

ABSTRACT

Since the “Belt and Road” Initiative was put forward, more and more Chinese companies go outside, corporate overseas behaviors are supervised by more and more stakeholders. Current studies focus on management fields, rare studies have been conducted in terms of Positive Discourse Analysis on domestic companies’ overseas social responsibility reports. The present thesis selects Chinese enterprises’ overseas CSR reports disclosed and the reports made on Chinese companies overseas social responsibility through the CCTV program as present research data. With the help of UAM corpus tool, annotation and calculation have been completed. Based on Appraisal Theory, from the perspective of Positive Discourse Analysis, the present thesis aims to discuss how Chinese enterprises negotiate various stakeholders so as to construct their corporate identity positively and shape their good overseas qualities.

After analysis, conclusions can be drawn as follows: First, Chinese enterprises have applied a large number of Inclination resources to construct their Affect inclinations, the corporate Affect Chinese enterprises revealed is remaining true and committed to their original goals, constantly pursuing progress and keep realizing their missions for stakeholders. Second, by applying a number of Judgment resources, Chinese enterprises, especially state-owned engineering, and oil chemical Chinese enterprise successfully constructed themselves as experts and authorities in the world stage, besides, Chinese enterprises long-term based in overseas countries actively brought in advanced skills, equipment and management expertise, focus on training local employees to improve their professional skills, which not only help solve the local employment problems, but also take actions to ensure their long term career development. Third, the Heterogloss resources help highlight the Chinese enterprises’ merits and qualities, specially, Chinese staff have shown strong commitment and sense of responsibility in the process of working overseas, they impressed the local partners with good job qualities such as their commitment to tasks, great endurance of hardships and the spirit of sacrifice, diligence and down-to earth working attitude. Moreover, by applying large numbers of modal words, Chinese enterprises justify their business practices and invade certain potential risks by making use of the

ambiguity function of the modal expressions.

Keywords: Chinese enterprises' oversea social responsibility; corporate image; stakeholders; positive discourse analysis.

摘要

自“一带一路”提出五年以来，越来越多的中国企业走出去，中企的海外行为面临更多利益相关者的监督和评价。现有关企业海外社会责任报告的研究主要集中于管理学领域，语言学相关研究多数集中于跨文化、评价理论、翻译等视角，鲜有研究对其进行积极话语分析。本研究选取中企披露的海外社会责任报告以及央视节目对中企海外社会责任的报道为研究的语料，借助 UAM Corpus Tool 2.8.7 对语料进行识别和统计，基于评价理论，从积极话语分析的视角探讨中企如何正面构建企业形象，协调各利益者，并积极塑造中企在海外彰显的优秀品质。

通过分析得出如下结论：第一，中企通过使用大量的表达倾向性的态度资源构建了自身的情感倾向，具体表现为将自身构建为不忘初心，不断追求进步，不断实现对各利益相关者使命的企业形象。第二，通过使用丰富的评判资源成功地构建中国企业，尤其是工程类，石化行业的中国国有企业在国际社会中专家，权威者的企业身份，具体体现在长期扎根海外的中企为当地引进先进技术，设备和管理经验，注重培训当地员工，促进其专业化，技能化，不仅有效解决当地就业问题，更关注当地员工职业生涯的长远发展。第三，通过采用多声对话的方式，一方面，构建中企员工具有强烈的使命感和责任感，在海外工作中彰显出敬业奉献，吃苦耐劳，脚踏实地等优秀职业素质，给当地合作伙伴留下深刻印象。另一方面，通过使用大量的情态动词，可以有效地帮助中企将自身的言行合理化，也利用情态动词模糊的语用功能，在规避潜在风险方面做出了相应的努力。

CHAPTER I INTRODUCTION

1.1 Research Background

In September 2013, for the first time, President Xi Jinping proposed the initiative of jointly building the Silk Road Economic Belt at Nazarbayev University in Kazakhstan, which later developed into the “Belt and Road Initiative”, with Community of a Shared Future for Mankind as the core connotation. Led by the policies, China is one of the biggest FDI outflow countries. As more and more Chinese companies going out for investment either in developing countries or in developed countries, it is essential to do their business not only in line with the local laws and regulations but also the local culture, customs as well as ways of doing things. Compared with operating at home country, the conditions overseas pose great challenges for Chinese companies to achieve sound and long-term development in real business practice abroad, in order to gain growth and development, it is necessary for companies to establish a harmonious relationship with various stakeholders.

Considering the fact that corporate social responsibility (CSR) reports are companies' essential means and carrier to communicate with various stakeholders worldwide (Zhang En, 2017), and it plays an important role in establishing trust between companies and stakeholders(Huang Cong, 2015) studying the companies' oversea CSR reports/country reports from linguistic perspective will be of great significance for enhancing CSR reports to play a greater role in communication. Meanwhile, the effect of communication that companies want to achieve is to align readers, in order to find out the ways of alignment, the perspective of positive discourse analysis should be adopted.

Positive discourse analysis (PDA) was put forward by J. R. Martin in his thesis named Positive analysis: solidarity and change. PDA, based on J.R Martin's Appraisal Theory(AT) which was Based on Halliday's systematic functional grammar, requires

researchers to embrace positive attitudes to view the discourse, focuses on speakers/writers' ways of reconciliation, alignment and design in establishing a harmonious interpersonal relationship with readers. Therefore the general public can have positive thoughts towards things so as to make their own contributions.

1.2 Research Significance

The research significance can be summarized from theoretical and practical aspects.

In theory, various researchers and scholars have made numerous studies on CSR reports, however these studies are mainly from accounting and management field, very few studies have been conducted from linguistic field. The disclosure of CSR reports is not only required by accounting but also a management strategy companies apply to communicate with important stakeholders to establish a harmonious relationship with them and win their trust and support. In order to examine the construction of positive interpersonal relationship, Positive Discourse Analysis (PDA) based on Martin's Appraisal Theory will be applied to analyze the linguistic features thus broadening the related theory and perspective.

Attitude system contributes to find out the attitudes companies reveal to stakeholders on various topics thus helping them to rationalize their business operations and win stakeholders' understanding and trust. Engagement system contributes to find out the ways companies apply to make dialogues with their stakeholders thus helping to show their stand to the stakeholders.

In practice, the thesis will strengthen the role CSR plays in companies' management. Nowadays, it is difficult for companies to achieve long-term success considering the fierce competition, companies operating in other countries face even greater challenges than operating at home. They need to satisfy the various stakeholders powerful enough to influence the companies' existence and success. It is assumed that there is a contract between society and companies, companies need to

operate within the scope and boundaries of the contract, CSR disclosure is an important way for companies to inform those stakeholders that they are operating in line with local laws and regulations to ensure their legitimate existence. However, it is not enough for companies to be just legitimate, more often than not, they need to do beyond that in order to meet the expectations from various stakeholders. As Chinese companies operating overseas, bearing the “Belt and Road Initiative” in mind, they are the identity cards of China, showing the outside world not only the skills, expertise, management but also the characteristics, principles, and ethics of Chinese workers, practicing the core of “Community of a Shared Future for Mankind”. A harmonious relationship between two countries may enhance the harmonious relationship between two foreign companies, conversely, a harmonious relationship may at the same time enhance two country relations. Therefore, through positive discourse analysis of Chinese companies’ overseas CSR reports will not only improve the role CSR plays in companies’ management, but also help figure out the ways to establish a harmonious relationship with overseas stakeholders for Chinese companies to achieve success and bring China certain positive influence.

1.3 Research Objectives

Firstly, this study is going to establish a corpus of Chinese companies’ overseas CSR reports/country reports.

Secondly, based on Appraisal Theory, the study is going to find out the linguistic features of the overseas CSR reports, and describe the distribution of attitude system, and engagement system within Appraisal Theory. The distribution of resources under two systems will be exhibited.

Thirdly, a comparison and contrast in terms of the linguistic distribution features is going to be made.

Finally, the writer will have a detailed analysis of the ways companies apply to establish interpersonal relationship as well as strategies that companies apply to create positive effect.

1.4 Structure of the Thesis

The whole thesis contains six parts. Chapter one is a general introduction to the present study consisting of the research background, research significance and research objectives.

Chapter two is the literature review, including the literature review of studies on corporate social responsibility(CSR) reports at home and abroad, and an introduction to Martin's Appraisal Theory.

Chapter Three describes the theoretical framework of the study, which consists of the theoretical structure of Appraisal Theory, namely Attitude system and Engagement system, and the resources under each system.

Chapter Four contains the methodology applied in this study, which includes research questions, data collection, research methods and procedures.

Chapter Five is the main body of the present thesis. Firstly, it presents a general description of the distribution of linguistic resources under Appraisal system. Secondly, a comparison and contrast will be made in terms of the distribution. Thirdly, based on the linguistic features, the writer will analyze the ways companies adopt to establish interpersonal relations as well as strategies companies apply to create positive effect.

Chapter Six is the conclusion part of the thesis. Major findings of the study are summarized. Besides, the implications and limitations for further study are put forward.

CHAPTER II LITERATURE REVIEW

The author searched the relevant studies with the keywords “corporate social responsibility(CSR)”, “corporate oversea social responsibility”, “corporate social responsibility(CSR) report” on Du Xiu published from 2008-2019. Though it is a hot topic in various studies, few studies integrating Chinese companies’ overseas CSR reports/country reports with PDA talking about the alignment, which is the study focus of this paper.

2.1 Previous Studies on CSR

Corporate social responsibility report has long been studied in fields like management, economics and accounting. There are abundant researches conducted by numerous scholars. This section introduces the previous studies home and abroad.

2.1.1 Previous Studies on CSR Abroad

CSR has been studied by numerous scholars, study fields can be summarized as the management field, accounting field and linguistic field, no matter in any field, the definition of it is a priority to talk about.

Firstly, many bodies or organizations have defined CSR, it is defined as a concept whereby companies integrate social and environmental concerns in their business operations and interaction with their stakeholders on a voluntary base, going therefore beyond their legal obligations ([European Commission](#), 2001). Besides, the World Business Council for sustainable development defines CSR as the involvement of firms in the contribution to the improvement of the quality of life for sustainable economic development, employment, community and society as a whole. Apart from such definitions made by the above world-level institutions, there are also those made by scholars. Carroll defines CSR as “the social responsibility of business encompass the economic, legal, ethical and discretionary expectations that society has of organization at a given point in time ([Carroll](#), 1991). CSR can be viewed as a compliance of laws and regulations set by the public sector, this has resulted in

growing interaction between governments, business and society as a whole(Jain, Aanchal and Kumar, Ram 2015). Though it is a hot research topic within or beyond management, the definition remains equivocal, a number of terms such as sustainable growth, corporate responsibility, corporate citizenship are used in the context of CSR. In the present study, it is understood as the obligations that companies need to perform in their operations at home or abroad in accordance with not only the laws and regulations but also the moral and ethical standards so as to satisfy and benefit the most stakeholders in the long run.

Besides the definition, other focuses within management and accounting field include the role of CSR, the benefits of CSR, CSR disclosure and variables influencing CSR. First, in terms of the role CSR plays in the company and the benefits CSR could bring to the company, some scholars proposed to treat CSR as a strategic means to achieve business sustainability(Clarkson, 1995; Frooman, 1997; Porter and Kramer, 2006;); help companies gain competitive advantages and enhance the innovation of consumer relations(Bhattacharya and Sen, 2004), as well as market evaluation(Klassen and McLaughlin, 1996), CSR shouldn't be viewed as a cost but a growth(Jain, Aanchal and Kumar, Ram, 2015). Besides the perceivable and tangible benefits brought by socially responsible behaviors conducted by corporations, being socially responsible may also bring enormous intangible benefits to a company such as increased profits, more protection of a company's brands, intellectual property and good will, building customer loyalty, increased sales and market share, increased purchase behavior(Lichtenstein et al, 2004), higher customer satisfaction and market value of a firm(Luo and Bhattacharya, 2006), improvement of company image and reputation, increased support from the community, and higher employee morale(Tan and Komaran, 2006). All in all, CSR changes when the role of the firm changes with the time. Second, in terms of CSR disclosure, it is viewed as the process of providing information designated to discharge social accountability taking the form of CSR reports. Academic research on CSR reporting has focused on: overall quality of CSR reports(Giovanna Michelin, 2015); relatively emphasis on different contextual elements(e.g., environment and sustainability) that have relevance to particular

industry sectors or regions(Sethi et al, 2017; Noyoo, Ndangwa., 2016); quality of integrity assurance(Sethi et al, 2017); the identification of appropriate content of CSR report(Lukas vartiak, 2016); the importance of reports within communication of CSR(Katarina Moravcikova et al, 2015; David Katamba and Cedric M. Nkiko,2017).

Besides studies in management and accounting field, there are scholars focusing on the discourse analysis of CSR reports. While previous discourse analyses of corporate social reports(annual reports and CSR reports)are primarily focused on their ideational function(Fairclough,1992), namely how these texts construe a particular representation of reality(Matteo Fuoli, 2011). Despite the widely acknowledged role of social reports as vehicles for the interaction and “dialogue” between organizations and society(Gray et al., 1995), their interpersonal function(Fairclough, 1992), that is, how through these texts reporting companies construe their identity and relationship with their interlocutors so as to align them have not been the object of systematic investigation.

2.1.2 Previous Studies on CSR at Home

Though CSR was initiated from the West, it is hot at home. Through searching studies on CNKI with the key words “corporate social responsibility”, “CSR”, and “CSR report” from 2010-2018 , domestic studies on CSR can be streamlined into the following fields: the management and accounting field, the linguistic field, and the translation field.

In management and accounting fields, topics consist of the definition of CSR, the CSR disclosure, Chinese CSR overseas, the impression management, etc.

First, the definition of CSR was originated from the west, still many domestic scholars have defined the concepts in their own way. Since corporations are part of the society, the profit maximization is not the sole purpose for corporate existence, CSR should bring the maximum benefits to the society(Zhang Xingwang, 2015). It is the moral obligation that a corporation must care to perform in order to get access to the social welfare(Zhang Lanxia,1999). According to Chen Bingfu(2000), CSR can be understood as supporting the public welfare and funding the philanthropic activities. Corporate responsibility refers to the obligations that a corporation is obliged to

perform in order to safeguard and enhance social benefits apart from the obligations of making the maximized profits for shareholders, it contains the responsibility for the employees, consumers, creditors, environment, resource protection and reasonable utilization, the promotion of the local economy, the social welfare and the public interests (Lu Daifu, 2001). According to Liang Guiquan(2004), the essence of CSR is the moral constraints of corporate economic behaviors under the circumstance of economic globalization. It is not only the corporate tenet but also the operating principle. It also serves as a set of management and appraisal system restricting the internal behaviors of corporate production and operation including the behaviors of suppliers. As more and more multinationals come to exist, increasing attention has been paid on their oversea practices, so the publication of oversea CSR reports are prioritized by some large multinationals. Therefore, the corporate oversea CSR reports are defined as reports disclosing social responsibility concepts, regulations and performance within a certain country or region, where a large scale of business operations are conducted by companies' branches based overseas(Zhang En, 2017). So far, there is no one absolutely recognized definition of CSR, while it has been extended immeasurably from the responsibility of economy, law, shareholders, stakeholders, environment, to culture.

Second, the disclosure of CSR is another topic on hot debate. Since CSR is new in China, it is not fully developed in both the academic field and business field, there are many criticizing remarks on corporation's CSR disclosure or the publication of CSR reports. According to Wu Xun(2015), the CSR disclosure has a weak point in timeliness, standardization as well as credibility. Huang Cong (2015) argued that the information disclosed by corporations is featured by goodness, a lack of realistic disclosure showing the other side of the coin makes its disclosure not comprehensive. Moreover, Wang Daopeng (2017) argued that the disclosure of CSR is not in a standard form, the content is lack of completeness.

Third, led by the domestic policies like “opening up to the outside” in 1973 and “the Belt and Road Initiative” in 2013, many Chinese firms go out to establish or

extend their business. Therefore, many domestic scholars began to study overseas CSR. [Ou Yangxiao](#)(2006) argued that economic responsibility, employee equity, environment protection, moral responsibility and philanthropic responsibility should be the main content of Chinese companies overseas responsibility. It is a consensus that comprehensive CSR could contribute to corporate long-term and sustainable development([Liu Bing](#), 2013). Since CSR issues are emphasized within China by Chinese scholars and corporations not long before, CSR consciousness is not well integrated with corporate culture, there are many problems occurred in corporate overseas operation, the prominent blames on Chinese companies are concerned with their pursuit for profit maximization, impairment of consumer benefits, arbitrary development, waste of natural resources, immoral competition, protruding the market order, lack of the awareness of safety production, etc([Yang Chunbao](#),2010). For businesses operating overseas, they should bear more responsibilities in order to balance interests among different countries and stakeholders when facing the complex international relationships, thus lessening the risks of conflicts and frictions related to politics, economy and culture so that a harmonious world can be established([Liu Bing](#), 2013).

Fourth, one more focus in management and accounting field is impression management. According to [Li Hong](#) (2009), CSR demonstrates the corporation's contribution to the society, the more responsibility one company shoulders, the better corporate image it tends to form, thus it is easier to form competitive advantages under resource-scarce operating environment. By controlling the length of the CSR discourses, the company could influence their readability, it is concluded that companies achieving great operating accomplishments have a greater length than companies failing to achieve good results. Besides, the average length of sentences in well-done companies' reports is shorter, and easier for stakeholders to read ([Liu Dan](#), 2015). [Huang Yixiang](#) (2016) argued that since information disclosure is the main way for stakeholders to corporate status quo and prospect, accordingly it becomes an important tool for corporations to apply in impression management. With the corporate impression being manipulated in their CSR reports, companies tend to get

recognition of the general public even if the company has failed to achieve good performance in their operation. (Meng Xiaojun, 2010; Ji Li, 2010).

Besides studies in management and accounting fields, there are also studies in linguistics. Studies include the comparison of word selection and transitivity process of CSR reports published by Chinese companies and foreign companies(Huang Dawang et al., 2017), the comparative analysis based on Appraisal Theory on CSR discourses published by American companies(Feng Qun, 2017), the corpus-based study on environmental protection discourses in CSR reports(Feng Mengyao & Guo Manyang, 2015), the study of critical discourse analysis on CSR reports(Peng Shuhuan, 2015), the study on CSR reports based on Hofstede's cultural dimension(Liu Ning, 2015).

The third study field contains studies on translation of CSR reports. Li Qingying(2017) studied the Chinese and English translation of CSR reports based on Newmark translation perspective, and the studies of English translation strategies of CSR reports base on Skopos theory(Shang Yabo, 2017).

To sum up, CSR has attracted many scholars both at home and abroad. The studies abroad can be concluded as studies in management & accounting field, which includes topics from the definition of CSR, the role of CSR, the benefits of CSR, CSR disclosure to variables influencing CSR, and the linguistic field, which includes studies of ideational function of CSR reports as well as interpersonal function of CSR reports. The studies at home can also be summarized as studies in management and accounting field, which contains topics from the definition of CSR, the CSR disclosure, Chinese CSR overseas, to the impression management, and linguistic field, which includes studies of word selection and transitivity of CSR reports and discourse analyses of CSR reports, with perspectives from critical discourse analysis to Hofstede's cultural dimension.

Though the studies on CSR abroad and at home are abundant, the study on alignment of companies' oversea CSR reports/Country reports from the perspective of Positive Discourse Analysis (PDA) has not been investigated systematically.

2.2 Previous Studies on Positive Discourse Analysis (PDA)

Positive discourse analysis was put forward by [Martin](#) in 1999, advocating researchers to focus more on the construction function of language so as to contribute to establish a more harmonious society. In order to have a clear understanding of Positive Discourse Analysis, a brief review of Discourse Analysis(DA) and Critical Discourse Analysis(CDA) must be conducted prior to review of PDA. This section will review them one by one.

2.2.1 Discourse Analysis (DA)

Since discourse analysis was put forward, studies both at home and abroad have been conducted extensively talking about discourse as well as discourse analysis. According to [Halliday](#)(1985), discourse is a multidimensional process...; a text...is the product of that process; Besides, [Brown and Yule](#)(1983) argued that the discourse analysts treats his data as the record(text) of a dynamic process in which language was used as an instrument of communication in a context by a speaker/writer to express meanings and achieve intentions(discourse). The scholars have reached a shared definition by taking text as a product, discourse as a process ([Huang Guowen](#), 2006). Since discourse analysis relates to various disciplines and theories, the present study draws the most emphasis on factors like the order of discourse, social relationships and social alignment, which are also the study focuses of scholars like Michel Foucault. That is to say, the attention is not only paid to the language use itself, but also the social practice, social facts and other related matters reflected by discourse and discourse analysis. In this aspect, language cannot merely reveal the order of the society, it also functions in constructing social identities and behaviors.

2.2.2 Critical Discourse Analysis (CDA)

Critical Discourse Analysis (CDA) was originated from Critical Linguistics(CL), CDA gains its preliminary development by the Lancaster school of linguists as a way of analysis on discourse. It brings the critical tradition in social analysis into language studies, and contributes to CDA with a particular focus on discourse, and on relations between discourse and other social elements(power, ideologies, institutions, social

identities, etc.)(Norman Fairclough, 2013). Compared with pure linguistic analysis from lexicons to grammar, CDA emphasizes the social factors influencing the production of certain discourse. Therefore, one may call it “sociopolitical discourse analysis” since it focuses on the relations between discourse, power dominance, social inequality and the position of the discourse analyst in such relationships (Van Dijk, 2014). According to J. R Martin(2000) who embraces the similar views, CDA is an approach to discourse analysis which focuses on inequality in society and the ways used in texts to realize power and ideology. CDA is primarily applied to discover the ideology hidden in the words and unveil the complex relations among language, power and ideology. It targets on media discourses transmitted through television, newspaper, broadcast, which are jointly thought as tools serving ideology. With CDA’s rapid development, the research scope has been extending, and contributed a lot to multi-disciplinary researches from various perspectives. It has contributed a lot to promote social progress.

Through years of research on CDA by numerous scholars, it has contributed a lot in discovering the inequality and discrimination hidden in discourses and also paid effort to their elimination. However, everything has two sides, since the CDA presupposes the existence of negative aspects of society, such as ideological discrimination, power inequality and conflicts, studies of this kind just serve as evidence to prove such existence, which may make people feel negatively about the society and the world. There are still positive aspects worthy of noticing and advocating even under a conflicting situation. Under such circumstance, Positive Discourse Analysis(PDA) generates.

2.2.3 Previous Studies on PDA Abroad

PDA developed initially from CDA which aims to discover the inequality and discrimination hidden in language thus eliminate them. According to Kress(1996), it is vital to change such deconstruction to construction, from criticizing negative behaviors to productive activities in order to build a better future based on conscious discourse analysis. Martin argued(2004)in his thesis “Positive analysis: solidarity and change”, there are two faces of discourse analysis, the one is called CDA realis, the

other one is CDA unrealistic, the former refers to CDA, the latter stands for PDA. While the latter is unrealistic, which means that it can come true as long as the community and people make joint effort and share a common goal. The focus of Martin's PDA is a complementation of CDA, meanwhile a valid combination of deconstruction and construction. It is assumed that, in any country or society, good news coexist with bad ones, the CDA on the bad ones are not merely negative in nature, but embracing positive meaning serving as a lesson for those engaged or a warning for those not engaged. Community consists of various opinions, only when one makes his opinion understood, empathy functions, can the harmony be realized(Martin, 2004; Pudlinski, 2005).

The focus of PDA lies in searching for community spirit, reconciliation and alignment. AT serves as one of the most valid and effective theories conducting positive discourse analysis. More attention should be paid to people's unity reflected by language, as well as their will to gain a living space in the society (Martin, 2004). All in all, PDA strives to guide people live in harmony and make positive improvement.

2.2.4 Previous Studies on PDA at Home

Though as a newly developed perspective, positive discourse analysis has been discussed by some domestic scholars. According to Huang Guowen(2006), both critical discourse analysis and positive discourse analysis are not focused on the language use, they emphasize interpersonal relationship and other social factors, language can construct social order, social interactions, it also plays a role in constructing social identity and exhibiting certain social function. Positive discourse analysis draws eyes on friendliness, both the data and the goal of analysis are more constructive, theory of behavioral interactions proposed by Habermas can serve as a complementation for Appraisal theory (Huang Huijian & Leng Zhanying & Gu Yueqiu, 2007). Apart from discussion made on research theories, much effort is made on talking about the research field, essence, and the functions of positive discourse analysis. Liao Xin(2009) argued that positive discourse analysis evolved from critical discourse analysis aims to establish a harmonious society with a different way of

discourse analysis(Zhu Yongsheng, 2006; Tang Qingye, 2008; Ding Ailan, 2009; Yang Tingting, 2009). The data for analysis can be extended to fields like negotiation, diplomacy, and consultation. It is essential to know that society progresses based on inheritance and criticizing, positive discourse analysis is a branch of discourse analysis which exists as a discipline covering three subjects, namely the linguistic philosophy aiming to reflect the human world, the sociology aiming to reveal the society, and linguistics aiming to uncover the linguistic rules used in language units(Hu Dongping & Yi Laibin, 2009), therefore, positive discourse analysis should be studied by more researchers comprehensively in order to promote the progress of domestic research and teaching(Hu Zhuanglin, 2012). Previous research data in PDA analysis mainly come from the government working report(He Shan, 2015; Tian Tingting, 2017; Han Lifang, 2017) and media(Liu Ping, 2014; Bai Xue, 2014; Zhao Chuang, 2016).

2.3 Summary

To sum up, as a newly developed research perspective, there remains a lot of work to do in order to widen its application. First, types of studied texts should be extended in order to broaden its universality. Previous studies corpus abroad and at home are focused on news reports(Martin, 2004; Zhao Chuang, 2016), novels(Zhang Ting, 2016; Tian Tingting, 2017), and government reports(He Shan, 2015; Han Lifang, 2017). Few have studied companies' oversea CSR reports from this perspective. Second, the research method based on corpus should be further applied. CSR publications have been studied extensively and profoundly in management and accounting, but few in linguistics. Therefore, this paper intends to analyze the texts of CSR reports written by Chinese companies introducing their CSR performance in oversea countries from the perspective of PDA, based on Martin's Appraisal Theory, which analyzes the chosen discourses from appraisal sub-systems: attitude, and engagement, with the aid of corpus analysis instrument UAM 2.8.7, which will make up for the inadequacy of previous studies, enrich the application of corpus in PDA and promote the research on CSR reports.

CHAPTER III THEORETICAL FRAMEWORK

The present thesis is based on PDA and AT. While PDA is a perspective requiring researchers to think matters positively, focusing on the reconciliation and alignment, it doesn't have its theoretical framework like CDA. As PDA has been introduced in detail in previous literature review, therefore, this chapter will take Attitude System and Engagement System under Martin's AT as the focus of discussion, which serves as the theoretical framework of the present thesis.

The Appraisal Theory (AT), as a further development of the interpersonal meaning of systematic functional grammar (SFG), put forward by J. R Martin, is a model of evaluative meaning. Attitude focuses on evaluation, it consists of affect, our emotional reactions, judgment, our ethical stance on behavior, and appreciation, our aesthetic orientation to phenomenon. Alongside the attitudinal resources, it contains systems for adjusting a speaker's commitment to what they are saying-referred to as engagement. Engagement includes options for both eliding and referencing dialogism in discourses (Fuller, 1998), they can also be called Monogloss and Heterogloss. Below is an overview of Attitude and Engagement System.

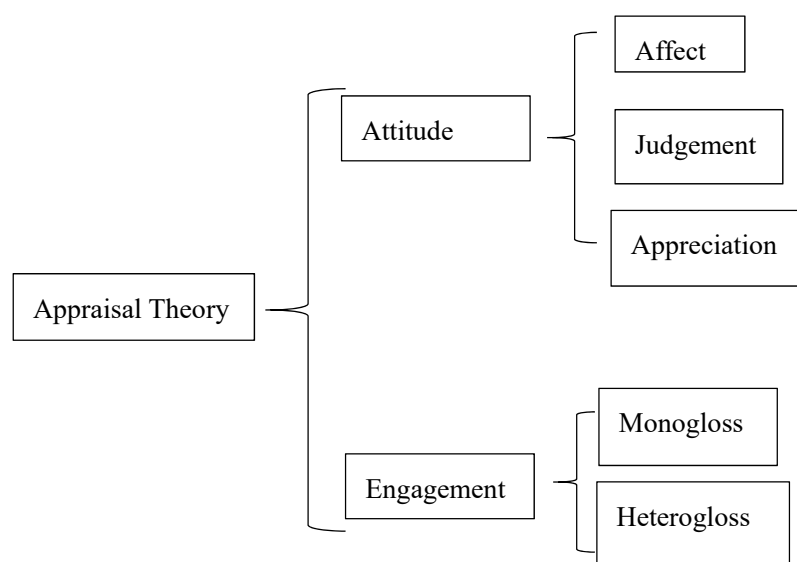

Figure 3.1 The theoretical framework of Attitude and Engagement System under Appraisal Theory

3.1 Attitude System Under Appraisal Theory

Attitude system is concerned with the values by which speakers pass judgments and associate emotional/affectual responses with participants and processes by reference either to emotional responses or to systems of culturally-determined value systems. Attitude itself consists of three sub-systems, namely Affect, Judgment and Appreciation. According to [Martin & White](#), Affect refers to the characterization of phenomena by reference to emotion. Judgment refers to the evaluation of human behavior with respect to social norms. Appreciation refers to the evaluation of objects and products (rather than human behavior) by reference to aesthetic principles and other systems of social value. The classification of Attitude is as followed:

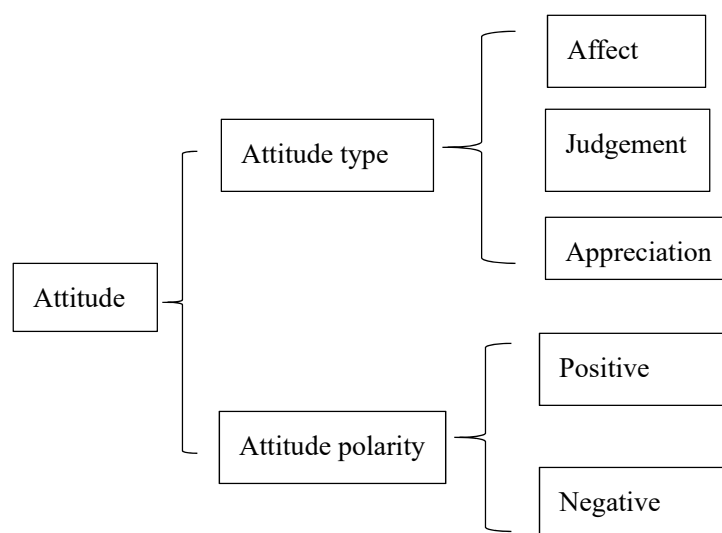

Figure 3.2 The classification of Attitude

3.1.1 Affect Resource

Affect is concerned with emotional disposition and responses, which is achieved through mental processes of reaction (This pleases me, I hate chocolate, etc) and through attributive relationals (I'm happy, I'm sad, She's proud of her achievements, he's frightened of spiders, etc). It can also be realized by ideational metaphor in form of nouns (His fear was obvious). According to [White](#), the values of affect occur as

either positive or negative categories (love versus hate, please versus irritate) and that each meaning is located along a sliding scale of force or intensity from low to high(like, love, adore).

According to Martin, a framework entertaining in/security, dis/satisfaction, and un/happiness should be used to evaluate effect resources. The detailed classification is as followed:

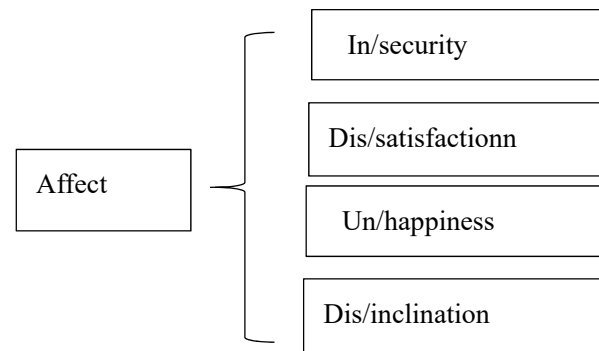

Figure 3.3 The classification of Affect

3.1.2 Judgment Resource

Based on White, judgment is concerned with normative assessments of human behaviors, the attitudinal sub-system of judgment consists meaning which serve to evaluate human behavior positively and negatively by reference to a set of institutionalized norms. Therefore, judgment is involved when the speaker provides an assessment of some human participant with reference to that participant's acts or dispositions. Since judgment is highly determined by cultural and ideological values, it is proposed that two broad categories of social sanction and social esteem should be used to evaluate judgment.

Judgment of social esteem involve evaluations under which the person judged will be lowered or raised in the esteem of their community, but which do not have legal or moral implications. Thus social esteem is further divided into normality (how unusual someone is), capacity (how capable someone is) and tenacity (how dependable someone is). While if one breaches social sanction, he/she may need a lawyer or a confessor. Thus social sanction is further divided into veracity and

propriety. The classification of judgment is as followed:

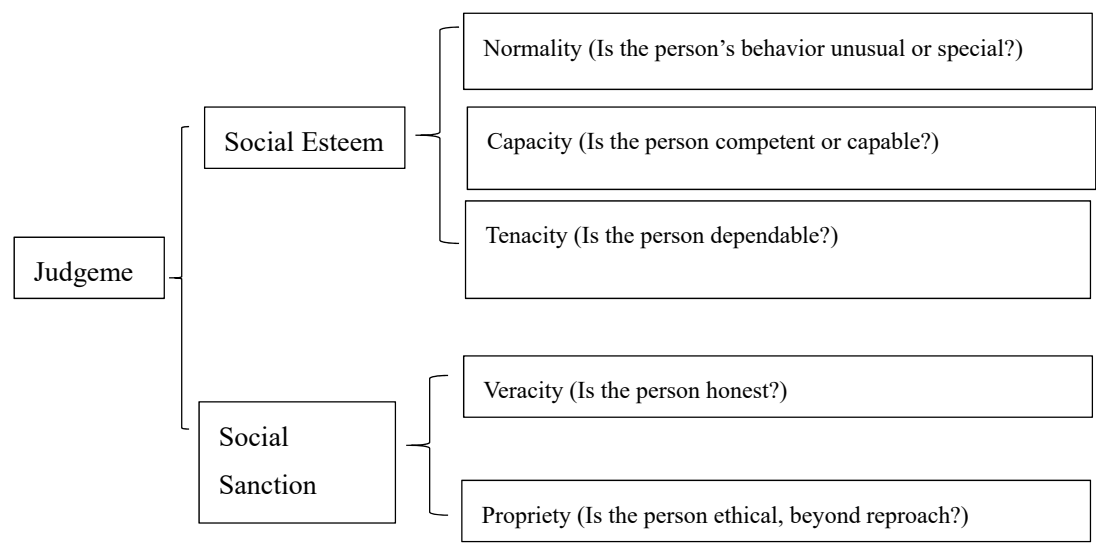

Figure 3.4 The classification of Judgment

3.1.3 Appreciation Resource

Appreciation is the system by which evaluations are made to evaluate products or processes. It consists of values that are under the general headings of aesthetics and non-aesthetic category of social valuation. Appreciation can be viewed as a system by which human feelings, either positive or negative, towards products, processes and entities are institutionalized as a set of evaluations. Therefore, whereas judgment evaluates human behaviors, appreciation typically evaluates texts such as plans and policies, as well as manufactured or natural objects. Humans may also be evaluated as appreciation once they are treated more as entities than participants, like a beautiful woman. Rothery and Stenglin propose three subcategories under which appreciations may contain: reaction, composition and valuation. Reaction occurs when a product/process is evaluated in terms of the impact it makes or its quality. Composition occurs when the product/ process is evaluated according to its makeup, according to whether it conforms to various conventions of formal organization. Social valuation refers to the fact that the product, process or object is evaluated in accordance with various social conventions. The classification is as followed:

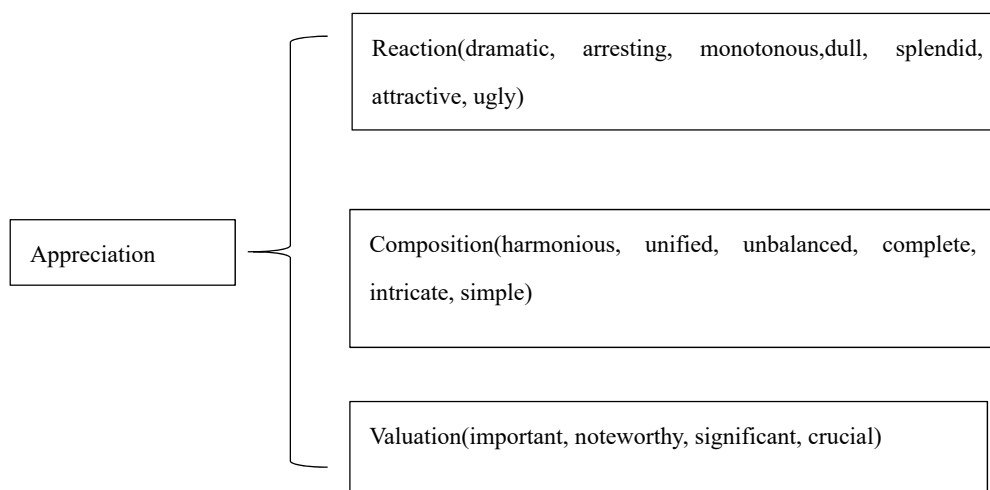

Figure 3-5 The classification of Appreciation

3.2 Engagement Under Appraisal Theory

According to [White](#), Engagement system covers all the resources by which textual or authorial voices is positioned intersubjectively. It can also be understood as the ways applied by the author to negotiate meaning with actual and potential audiences. It is assumed that Engagement is divided into monogloss and heterogloss. Monogloss ignores the diversity associated with all utterances. While heterogloss acknowledges the diversity. It is assumed that texts are heteroglossic, they more or less acknowledge some convergent and divergent socio-semiotic realities. In order to further understand the concepts, it is necessary to reflect the assumption made by [Bakhtin](#), who insists upon the intertextual nature of all texts, observing that all texts necessarily reference, respond to, and to greater or lesser extents incorporate other texts both actual and prospective.

The desire to make one's speech understood is only an abstract aspect of the speaker's concrete and total speech plan. Moreover, any speaker is himself a respondent to a greater or lesser degree. He is not, after all, the first speaker, the one who disturbs the eternal silence of the universe. And he presupposes not only the existence of the language system he is using, but also the existence of proceeding utterances-his own and the others'-with which his given utterance enters into one kind of relation or another. Any utterance is a link in a very complexly organized chain of

other utterances.(Bakhtin 1981:69)

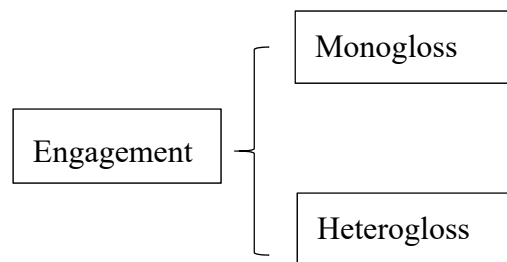

Figure 3-6 The basic classification of Engagement

3.2.1 Monogloss

Since we all live in a common society, therefore, it is possible for people to talk about things by reference to other people's views either to agree or to disagree, while monogloss refuses others' viewpoints, rejecting to have any communicative interaction with others. CSR reports play an important role in communicating with outsiders, thus monogloss is little applied by companies or never.

3.2.2 Heterogloss

Heterogloss engagement acknowledges alternative positions, but to some extent which can vary greatly. It can be dialogically contract(to reject, counter) alternative voices, or be dialogically expanding(to entertain, acknowledge) alternative voices.

Under the category of dialogic contraction, two sub-categories are proposed: 1) proclaim, through which the textual voice represents the proposition as a reliable and grounded one, 2) disclaim, through which it positions itself as being at odds with some conflicting position. The resources for achieving proclaim are: 1) pronounce, utterances making use of explicit authorial interventions. 2) concur, wordings such as of course. 3) endorse, foregrounding others' convincing voices through attribution to external sources. Disclaim is realized through deny-straight negation and counter-referencing others' viewpoints for the specific purpose of rejecting it.

The dialogic expansion includes three sub-categories: 1) entertain-resources like

seems, appears, suggest, apparently, words conveying likeliness or probability. 2) attribute- resources like X claims, through such usage, it can either acknowledge the possibility of a proposition’s validity or to distance the speaker from the proposition, by representing it as an open question. 3) justify-which is a question of internal logical substantiation of non-factual propositions, typically realized by conjunctives of purpose and consequence. The classification of heterogloss is as followed:

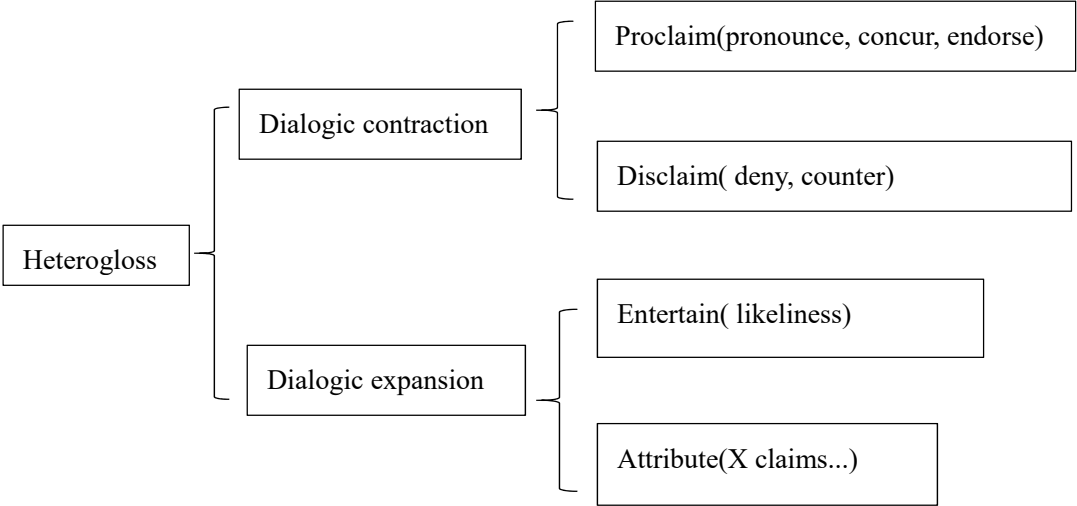

Figure 3.7 The classification of Heterogloss

3.3 Theoretical Framework of Present Research

The theoretical framework of the present study is established by combination of Attitude System and Heterogloss within [Martin’s](#) Appraisal Theory. A tentative theoretical framework of present research is shown in following Figure.

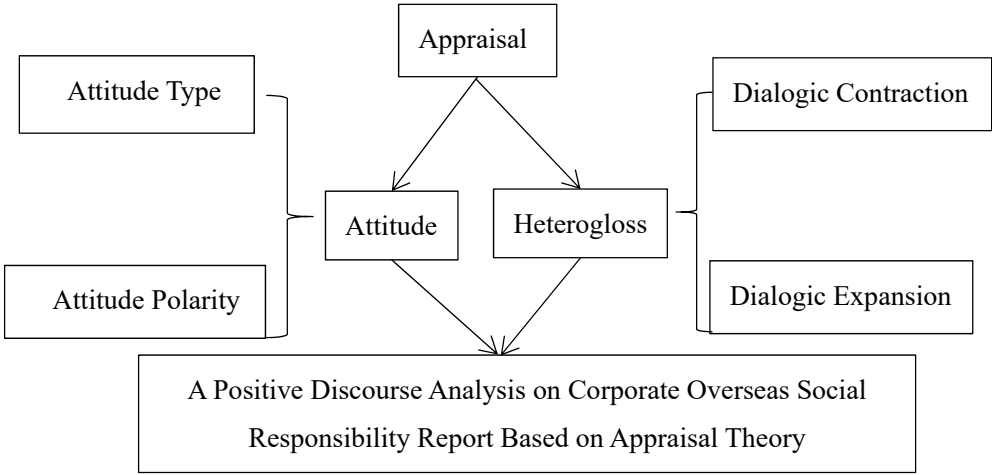

Figure 3.8 The Theoretical Framework of Present Research

Based on Appraisal Theory, there are three types of attitude resources under Attitude System, namely Affect, Judgement and Appreciation. And each type of attitude resources can be positive and negative, which can be called Attitude Polarity. Since the aim of the thesis is to conduct positive discourse analysis, that is to discuss the alignment, reconciliation, design and positive effect of corporate overseas social responsibility reports, the Attitude System and Heterogloss play a very vital role in the process. Therefore the above theoretical framework will guide the present study.

CHAPTER IV RESEARCH METHODOLOGY

4.1 Research Questions

Since companies' CSR reports are important means of communication, it plays an essential role in establishing a harmonious interpersonal relationship between companies and various stakeholders. In order to achieve that, the CSR reports must carry lexicons help establish interpersonal relationship with the readers. Considering the fact that a harmonious interpersonal relationship should be established based on mutual understanding, CSR reports is a mono-logic way of communication, therefore, in order to gain mutual understanding, the CSR reports should apply linguistic skills to show their identity constructed by themselves, reconciliation and alignment in their disclosing CSR practices. Thus, from the perspective of PDA, based on AT, this thesis is going to analyze the distributions of linguistic resources under attitude system, engagement system and graduation system used in corporate oversea CSR reports in order to find out how these linguistic resources help companies construct their identity, win various stakeholders' trust, and constantly maintain and enhance positive and harmonious interpersonal relationship. Thus the following research questions are put forward:

- 1) What are the linguistic features of corpora concerning Chinese companies' oversea CSR disclosure? What are the frequencies and distributions of different appraisal resources in the corpora?
- 2) How do Chinese companies apply linguistic devices to construct their corporate identity positively?
- 3) How these linguistic features help Chinese companies align stakeholders so as to generate positive effect in Chinese enterprises' oversea operations?

4.2 Data Collection

According to the study conducted by [Zhang En, Wei Xiuli and Wang Zhimin](#),

which studies the overseas CSR reports released by Chinese enterprises(Zhang En et al., 2017), there are altogether nineteen oversea CSR reports released by eleven companies, considering the reports' length and availability, the present thesis chose ten full oversea CSR reports in English as research data, the reports are released by Power China(<http://en.powerchina.cn/>), CNMC(<http://www.cnmc.com.cn/>), MMG(<http://www.mmgroup.com>),CNPC(<http://www.cnpc.com.cn/cnpc/index.shtml>) and China Minmetals (<http://www.minmetals.com/english/>) respectively. While considering the limited number in the enterprises, the writer collects media reports disclosing the 25 corporations' overseas business operations through CCTV program *The "Belt and Road" of "Homeland, Dreamland"* as research data together with the CSR reports serving as a complement in order to conduct the study in a more comprehensive perspective.

4.2.1 Criteria for Data Selection

In order to ensure the reliability, typicality and generality of data collected, some criteria have been taken into account when selecting data.

Firstly, the overseas CSR reports must be English version, specializing the corporation' s oversea social responsibilities in every aspect.

Secondly, the reports collected through the media CCTV program are all English version, consisting of the interviewees being corporate employees, employers, managers, cooperation partners, clients, local government, as well as local community members, all being stakeholders of Chinese enterprises.

Thirdly, all the discourses are collected from 30 Chinese companies operating overseas.

4.2.2 Description of the Data

The texts are collected are mainly from the corporate social responsibility reports published on the official websites, with the total number of word tokens amounts to 160,258, meanwhile complemented by the texts gathered from the CCTV program *The "Belt and Road" of "Homeland, Dreamland"*, with the total number of word tokens amounts to 25,339 . There are altogether 30 Chinese companies involved, total word tokens amounts to 185,597, the list of the companies selected is exhibited in the

appendix.

4.3 Research Methods

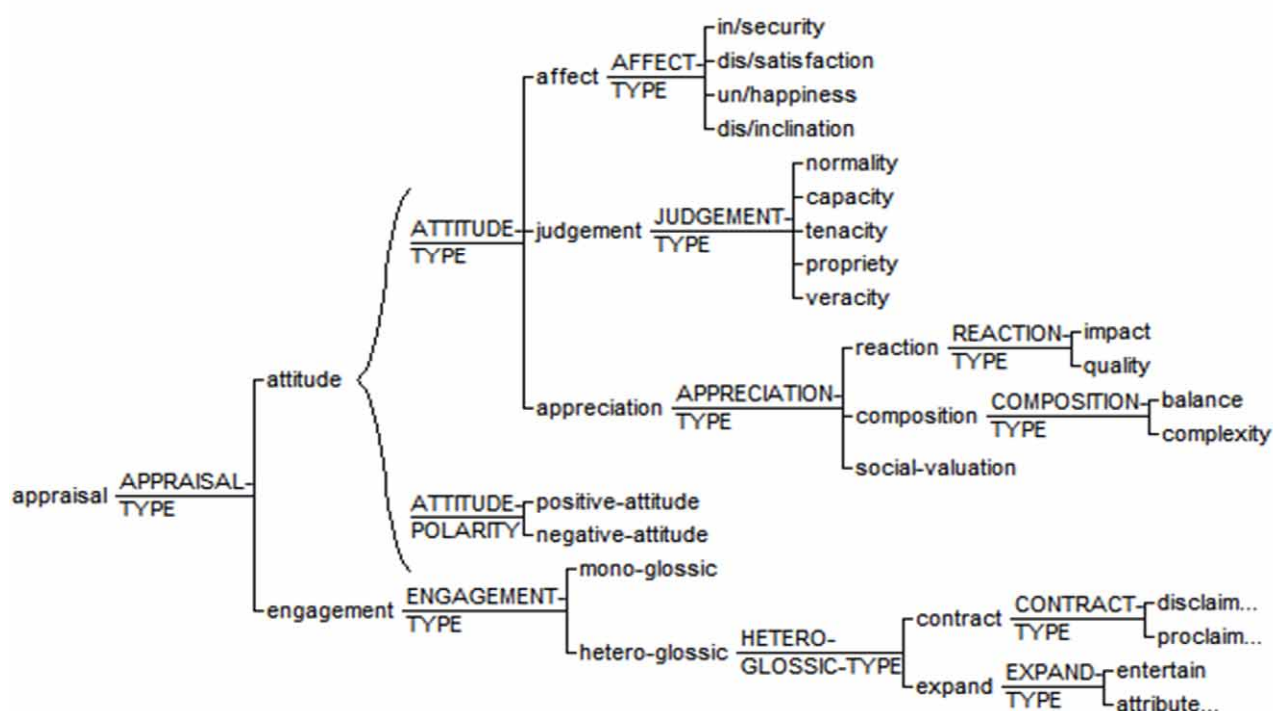

On the one hand, all the CSR reports collected will be imported into the UAM Corpus Tool 2.8.7, since they are released by different companies, therefore, five sub-corpus representing five different companies will be established. On the other hand, the CSR texts collected through the program “Belt and Road” of “Homeland, Dreamland” will be annotated once again in the Corpus. Based on Martin and White, firstly, all the texts are annotated under the framework of Appraisal Theory, thereafter, descriptive statistics will be used to show the frequency and percentage of linguistic resources within different appraisal systems. With the application of UAM corpus, the descriptive statistics will be demonstrated more accurately and straightforward.

After a presentation of linguistic features of the texts, namely the distribution and frequencies of appraisal resources being displayed, a detailed analysis will be carried out to show how the appraisal resources are used to express reconciliation and alignment. Finally, the results of analysis are illustrated by some typical examples drawn from the text samples to make it reliable and convincing.

4.4 Research Procedure

First, set up the corpus of PowerChina, corpus of CNMC, corpus of MMG, corpus of CNPC and the corpus of China Minmetals, Corpus of “Belt and Road” of “Homeland, Dreamland” respectively.

Second, design and edit the coding scheme under AT with the help of UAM UAM Corpus Tool 2.8.7 to start a new project. There are five steps to process the coding. First, the corpus needs to be launched, a new project will be started, meanwhile naming the new project. Second, all the reports are transformed from pdf format into txt format. Third, click “add a layer”, which is a button used to input and edit the scheme based on the existing theoretical framework. The coding scheme of AT put forward by Martin in the present study is shown below(Figure 4.1). Fourth, five files namely corpus of PowerChina, corpus of CNMC, corpus of MMG, corpus of CNPC, the corpus of China Minmetals as well as the corpus of “Belt and Road” of “Homeland, Dreamland” are imported separately into the corpus(Figure 4.2). Fifth, code the files by assigning appraisal features in accordance to the designed scheme to the lexical items and clauses. After coding, the descriptive statistics will be demonstrated more

accurately and straightforward.

Figure 4.2 The Coding Scheme of Appraisal System

Thirdly, after all the texts being inputted into the corpus, identification and annotation will be carried out in line with the proposed theoretical framework put

forward by Martin, namely Attitude system and Engagement system. The following Figure 4.3 is an exhibition of how attitude resources and engagement resources are annotated.

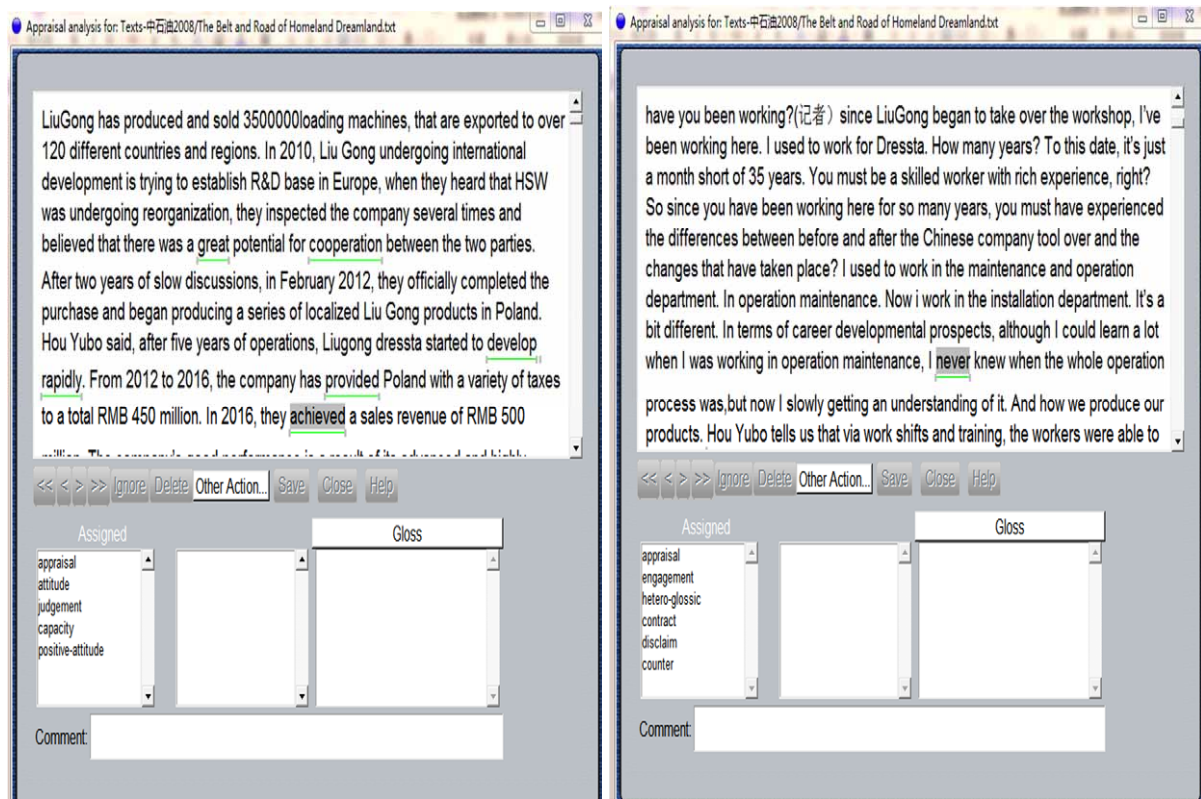

Figure 4.3 The Annotation of the Corpora

Fourthly, the distribution and frequencies of general attitude and engagement resources are illustrated to show the linguistic features of the texts.

Finally, clarify the linguistic features of the texts, discussing the linguistic strategies companies apply to construct themselves in the process of disclosing based on the annotated attitude resources, and the interpersonal meaning of the texts conveyed through engagement resources.

CHAPTER V RESULTS AND DISCUSSIONS

In this chapter, the descriptive statistics of the corpora will be presented showing the general frequencies and distributions of Attitude and Engagement resources in the corpus. Then, a detailed positive analysis of Chinese companies' ways to construct their overseas corporate identity will be carried out. Thereafter, a discussion of the positive influence Chinese companies have shaped overseas will be talked about. Finally, sum up the linguistic features revealed by overseas CSR reports released by Chinese companies, and summarize Chinese companies' positive overseas identities shaped as well as the positive influence created, which are main ways of Chinese companies to align various stakeholders and maintain harmonious relations with them.

5.1 General Description of Attitude and Engagement Resources in the Corpora

In this part, a basic description of the corpora is presented, which includes a general description of Attitude and Engagement resources annotated from the reports (Figure 5.1).

Based on the Attitude system and Engagement system in Martin's Appraisal theory, with the help of UAM Corpus Tool, the identification and annotation of the texts covering 30 Chinese enterprises are successfully calculated, the percentage and the number of Attitude and Engagement resources are exhibited in the following figure.

Feature	Percent	N
APPRAISAL-TYPE	N=13314	
Attitude	87.2%	11608
Engagement	12.8%	1706
Attitude Polarity	N=11574	
Positive attitude	97.90%	11331
Negative attitude	2.10%	243

Figure 5.1 The General Distribution of Attitude and Engagement Resources

The figure above is a demonstration of the Attitude and Engagement resources revealed from altogether 30 Chinese companies, it is clear that there are rich appraisal resources allocated, meanwhile the appraisal resources under Attitude system make the largest proportion. Compared with the large occupation of attitude resources, there is a smaller occupation of Engagement resources, the different occupation is a reflection of different functions of Attitude resources and Engagement resources, the former are mainly applied to construct self-identities, while the latter are mainly applied to establish interpersonal relationships. Though Attitude and Engagement resources have different functions, they are not absolutely clear-cut, they work jointly to achieve alignment. Since corporate overseas social responsibilities reports take the largest part of the corpora and mainly function to disclose their overseas operation, which is closely related to the Affect, Judgment and Appreciation subsystems under Attitude, therefore such occupation is appropriate and reasonable. Apart from getting to know the general linguistic features of the integrated corpora, a more detailed distribution of Attitude and Engagement systems respectively in terms of the sub-systems is shown below.

5.2 PDA Analysis of Attitude in the Corpora

It is known that there are three sub systems under Attitude system, namely Affect, Judgment and Appreciation, therefore this section will analyze the sub systems one by one.

5.2.1 PDA Analysis of Affect Resources in the Corpora

Affect resources are concerned with four sub categories, namely the In/security, Dis/satisfaction, Un/happiness, and Dis/inclination, the detailed distribution of the linguistic resources as well as a general word list is illustrated below.

AFFECT-TYPE	N=456	
in/security	0.7%	3
dis/satisfaction	5.5%	25
un/happiness	11.2%	51
dis/inclination	82.7%	377

Figure 5.2 The General Distribution of Affect Resources Under Attitude

Table 5.3 General Word list of Affect

Affect resources	Occurrence	Affect resources	Occurrence
respect	82	happy	14
focus	72	pleased	11
actively	57	uphold	13
aim	47	continue	12
strict	42	satisfaction	12
principle	41	pleased	12
support	39	proud	10
committed	39	understanding	10
care	34	pursue	9
goal	21	cherish	8
active	21	always	7
responsible	20	want	7
confidence	20	seek	7
commitment	19	want	7
mission	19	willing	6
encourage	18	love	6
value	17	aspiration	4

There are four sub subcategories under Affect system in AT, from the above figure, it is clear that 82.7% Affect resources applied fall into the Dis/inclination category, from the positive attitude polarity, to be specific, they are mostly are inclination resources. Then follows the category of Un/happiness, Dis/satisfaction/, and In/security. Thus it shows that Chinese companies are more likely to show their inclination than express happiness, satisfaction and security in corporate reports. It is reasonable to consider the fact that with the “Belt and Road” Initiative” being put forward, there are countries welcoming Chinese companies, which is the good aspect of things, while there are also foreign countries distrusting Chinese companies, preventing themselves from refreshing their negative impression on Chinese companies, so Chinese enterprises prioritize to make positive inclinations than express In/security, Un/happiness, and Dis/satisfaction. The category of Dis/inclination shows one’s psychological priority of doing things, it is concerned with resources like focus, respect, commitment, aim, goal, mission, etc (see Table 5.3). By applying a large number of resources showing inclination, Chinese companies can gain the access to construct their personalities worthy of others’ trust worldwide. With the application of Affect resources, Chinese companies can inform the various stakeholders their psychological conditions and attitudes to gain empathy and support thus to lay a foundation to establish a harmonious relationship with stakeholders concerned. In order to further understand the Affect resources and their positive effect, some representative examples will be illustrated below.

5.2.1.1 PDA Analysis of Affect Resources in Companies’ Oversea CSR Reports

- 1) **Adhering to [Attitude-Affect: inclination]** local laws and regulations, we are **committed [Attitude-Affect: inclination]** to sharing the fruits of our corporate development with our employees; we **value [Attitude-Affect: inclination]** the diligent work and close cooperation between Chinese and Indonesia employees, and are **committed [Attitude-Affect: inclination]** to employee health and safety and to creating a good working environment (sample A1: CNPC - Indonesia report, page 3).
- 2) We **love [Attitude-Affect: inclination]** and **cherish [Attitude-Affect:**

inclination] this diverse ecological environment, where Indonesian people have lived for generations. We strictly **abide by [Attitude-Affect: inclination]** local laws and regulations as well as international HSE standards, and **continuously [Attitude: Affect: inclination]** update our HSE management system in order to minimize the environmental impact of our operations (sample A2: CNPC - Indonesia report, page 4).

- 3) We are working to develop sustainably, keeping our **focus[Attitude-Affect: inclination]** on discovering more oil & gas, increasing mature oilfield production, expanding the oil & gas market, and creating more benefits for our shareholders (sample A3: CNPC - Indonesia report, page 5).
- 4) We **actively[Attitude-Affect: inclination]** promote localized operations, provide employment opportunities for local residents, conduct systematic professional skills training and appraisal, provide competitive job levels and positions for local employees, **respect[Attitude-Affect: inclination]** religious beliefs and ethic customs of local employees, and provide aid in building mosques(sample A4: PowerChina- Indonesia report, page 4).
- 5) In the future, PowerChina will **continue[Attitude-Affect: inclination]** to uphold the responsibility concept of “what we do is for improving people’s livelihood and promoting social progress” and the international cooperation concept of “mutually beneficial cooperation and mutual development”, devote ourselves to local infrastructure construction and social development, **continue[Attitude-Affect: inclination]** to deepen and expand business cooperation areas, contribute wholeheartedly to the local community, **promote[Attitude-Affect: inclination]** the sustainable development of the company and the local community, economy and environment, and build the image of a highly **responsible[Attitude-Affect: inclination]**

Chinese company (sample A5: PowerChina- Indonesia report, page 4).

As Affect refers to the emotional inclinations made by writers on things' development, working to kindle the same emotion generated from the readers. The Affect resources of inclination applied in the reports are abundant consisting of "adhere to", "abide by", "love", "committed", "cherish", "continuously", "focus", "continue", "to promote" "to build" "actively" "and "continue". They help clarify the emotional inclination of Chinese companies in various aspects including creating job opportunities for local employees, improving the living standard of local community, protecting local environment, discovering more oil reserves, producing more mature oil, respecting local religious beliefs and customs and abiding by world rules and regulations. Based on such effort, Chinese companies are trying to align important stakeholders like local employees, local government, environmentalist, the local community and world legal organizations which play a key role in the process of their long-term overseas development. From the abundant application of Affect resources of inclination, they are first informing the outsiders that they are adhering to international rules and regulations thus constructing themselves as being legitimate to local government and organizations, then constructing their personalities as being committed to their mission, being respectful to the local employees and local communities, and being considerate for protecting the local environment. Since the "Belt and Road" Initiative is put forward by China, it is clear that Chinese companies bear huge responsibility in implementing the great initiative in the world stage. The international rules and regulations are indispensable for Chinese companies to abide by throughout their oversea operations, which serves as the top priority. Their business performances are under direct supervision of various parties, Chinese companies are destined to align all vital stakeholders by making them informed that they are protecting their interest, after all, the long-term development of "Belt and Road" Initiative can't be achieved without the participation of the other sides. From the above examples, we can see that local government, local community, local employees and environmentalist are the main stakeholders that Chinese companies want to align. Therefore the emotional inclinations made by Chinese companies must cater to the emotional inclinations of these stakeholders. The descriptions of Chinese companies' overseas' operations must meet the same expectations of the important stakeholders thus align them and develop their empathy.

The data above are selected from the corporate CSR reports, the following examples are drawn from the CCTV program the “Belt and Road” of “Homeland, Dreamland”. The examples are analyzed separately in the present thesis, mainly considering their different sources, one is from the companies’ official websites, the other is from the CCTV program, though both are second hand, they present different perspectives, which make the data can complement each other from different angles contributing to a more comprehensive PDA analysis concerning the Chinese corporate social responsibilities overseas. Some representative examples selected from the CCTV program are illustrated below.

5.2.1.2 PDA Analysis of Affect Resources in CCTV Program

- 6) “For Polish employees, the arrival of Liu Gong allows them to regain their steady job and development. This change makes them very **happy** [Attitude-Affect: **happiness**]” (sample A6: Liu Gong Dressta Machinery-“Belt and Road” of “Homeland, Dreamland”-episode 285).
- 7) “It is more than five years since completion of the Moink Hydro Power Plant, it has effectively solved the problem of the lack of electricity during the morning and evening peak hours in the south of Kazakhstan. As a member of the power plant, he is very **proud** [Attitude-Affect: **satisfied**]” (sample A7: CWE-“Belt and Road” of “Homeland, Dreamland”- episode 331).
- 8) “Talking about SRU unit, I think it was very good work, very fast work, and we finished it in time. And I think very good quality. You can say that everybody was **shocked** [Attitude-Affect: **satisfied**] that NFC could finish the work very fast. It was very fast. The organization was very good for this work. Hour to hour not day by day (sample A8: NFC- “Belt and Road” of “Homeland, Dreamland”- episode 322).
- 9) “I’m **happy**[Attitude-Affect: **happiness**] that they listen to what we say, they cooperate and once they get started, they work hard to get the job done”(sample A9: China Metallurgical Group Corporation- “Belt and Road” of “Homeland, Dreamland”- episode 8)

The Affect resources in the above examples revealed from CCTV program like “happy”, “proud”, and “shocked” are Affect attitudes expressed by the local employees and partners. Compared with Affect resources extracted from companies’ oversea CSR reports, the Affect resources here are more likely to express Un/happiness, Insecurity and Dis/satisfaction than Dis/inclination. First, local

employees feel happy for Chinese companies' arrival, which has brought them job opportunities enabling them to have a steady life and career development. Second, the Chinese staff felt proud for having solved problems for local country, they have reaped the sense of achievement and fulfillment through oversea practice. Compared with working at home, they realized more social value than personal value in their own way. Moreover, the local partners were shocked about the speed of Chinese construction, which shows their satisfaction on the projects completed by Chinese companies. There are also other Affect resources revealed from the CCTV program like cherish, hope, confidence, proud, admire, etc, which carry the similar emotional status as the above Affect resources, therefore the above resources are selected as the representative examples and analyzed.

In conclusion, based on the Affect resources analysis of the data either on those from oversea CSR report or those from the program, their functions are clear so that we can get to the following summaries. First and foremost, Chinese companies work to inform various stakeholders that they prioritize international rules and regulations, then they are constantly aligning the outsiders by constructing themselves as careful, committed, considerate, respectful and responsible in order to achieve legitimacy and lead the readers to generate positive thinking on Chinese companies and the “Belt and Road” Initiative. The positive effect can be summarized as improving the corporate image and enhancing the reputation of Chinese companies in the stage worldwide. Besides, from a more constructive viewpoint, since the “Belt and Road” Initiative is put forward by China, advocating the building of “a common destiny for mankind”, Chinese companies and staff working overseas serve as frontiers turning the great vision into reality step by step. They keep making great and sincere effort to build a more harmonious society of mankind with the principle of mutual consolidation, mutual benefit and mutual sharing.

5.2.2 PDA Analysis of Judgment Resources in the Corpora

Judgment refers to the evaluation on the person or the entity's behaviors, in terms of the normality, capability, tenacity, propriety and veracity. The specific distribution of the Judgment resources as well as a general word list is illustrated below.

Feature	Percent	N
JUDGEMENT-TYPE	N=8390	

Continued

normality	0.3%	24
capacity	68.3%	5729
tenacity	8.9%	744
propriety	19.9%	1668
veracity	2.7%	225
ATTITUDE-POLARITY	N=8382	
positive-attitude	99.7%	8354
negative-attitude	0.3%	28

Figure 5.4 General Distribution of Judgment Resources

Table 5.5 General Word List of Judgment Resources

Judgment resources	Occurrence	Judgment resources	Occurrence
development	383	responsible	91
improve	347	efficiency	85
provide	282	actively	82
support	183	outstanding	78
achieve	174	complete	73
effort	164	upgrade	73
help	158	growth	72
promote	158	progress	71
also	152	fulfill	69
continue	141	benefit	66
develop	125	enhance	65

Continued			
strengthen	112	success	65
ensure	103	strive	61
good	98	maintain	60
create	96	promote	60
contribute	92	won	60
increase	91	advance	56

From the above figure, it is clear to see that there are also rich Judgment resources applied in corporate overseas CSR reports. Capacity resources take the largest part with an occurrence of 5,729 times. Then follow Propriety resources, Tenacity resources Veracity and Normality resources. 99.7% Judgment resources are positive in terms of polarity, from which we know that Chinese corporations' overseas behaviors are mostly positive and contributing from the viewpoints of Chinese companies. According to the different distributions of Judgment resources under different sub categories, the behaviors performed by Chinese corporations in overseas countries are primarily reflected as being capable, then hard-working and determined, sincere and truthful, and finally normal and standard. In order to have a further understanding of the positive effect conveyed by such linguistic resources, some representative examples are illustrated below.

5.2.2.1 PDA Analysis of Judgment Resources in Companies' Oversea CSR Reports

- 10) PowerChina has made **great** [Attitude: Judgment- capacity] efforts to **improve** [Attitude: Judgment- capacity] the infrastructure and **increase** [Attitude: Judgment- capacity] the energy demand of the countries (regions) where the projects are located. Through project construction, we **alleviate**[Attitude: Judgment- capacity] to a **great** [Attitude: Judgment- capacity] extent the contradiction between supply and demand in areas such as power supply in Zambia, and **provide**[Attitude: Judgment-propriety] energy power for the **development** [Attitude: Judgment- capacity] of other

local industries, hence making **great** [Attitude: Judgment- capacity] **contributions** [Attitude: Judgment- propriety] to the **improvement** [Attitude: Judgment- capability] of living conditions of the local people (sample A10: PowerChina- Zambia report, page8).

- 11) During the construction period, we take relevant **protective** [Attitude: Judgment- propriety] measures to **minimize** [Attitude: Judgment- propriety] the impact on the surrounding environment; after completing construction, we process biological restoration and treatment, and try to restore the original ecological environment of the places where the project is located **as much as possible** [Attitude: Judgment- tenacity] (sample A11; PowerChina- Zambia report, page11).

The Judgment resources revealed above consist of “protective”, “minimize”, and “as much as possible”, which belong to the propriety category, revealing that Chinese companies are not only completing tasks overseas but also they are doing good deeds for the local, which is closely related to the fact that many foreign cooperative partners brought by the “Belt and Road” Initiative are from countries less developed with poor local infrastructure and a lower level of economic development.

- 12) In addition to the sewage treatment system, the Itezhi-tezi project team built a water-supply system and purification treatment plant for the town of Katapa, **significantly**[Attitude: Judgment-capability] **improving** [Attitude: Judgment- capability] water supply for both production and living of the local people, and **winning**[Attitude: Judgment- capability] **acclaims**[Attitude: Judgment-capability] from the local people (sample A12: PowerChina- Zambia report, page28).

- 13) In order to **improve** [Attitude: Judgment- capacity] the health and medical conditions in Zambian communities, CNMC has operated several hospitals in mine areas, equipping them with **advanced** [Attitude: Judgment- capability] medical equipment and introducing **sophisticated** [Attitude: Judgment- capability] medical technologies in their operation. (sample A13: CNMC- Zambia report, page27)

The above examples are extracted from the corporate CSR reports. The Judgment resources are mainly within the capacity and tenacity categories. The resources like “significant”, “improve”, “advanced”, “sophisticated” and “win”,

are all applied to show the capability of Chinese companies overseas. Through the application of such resources, Chinese companies are making design and reconciliation with the various stakeholders. By disclosing such information, it would be clear for the outsiders to know the real abilities of Chinese companies in the new era. Only in this way, can they prove themselves of possessing real capability in the global market, can they gain more access to cooperate with partners boosting local development along the Silk Road.

14) Its **efforts** [Attitude: Judgment- tenacity] have **improved** [Attitude: Judgment- capability] local medical software and hardware conditions and formed a **modern** [Attitude: Judgment- capability] regional medical network (sample A14: CNMC- Zambia report, page27).

15) Culture and education are the basis for social and economic development. CNMC participates in **improving** [Attitude: Judgment-capacity] local education system, **gives** [Attitude: Judgment-propriety] support to education programs at all levels, including primary school, technical school, and university, and actively **helps** [Attitude: Judgment-propriety] Zambian people **improve** [Attitude: Judgment-capability] their education and vocational skills, and turns out industrial workers, professional experts, and managerial talents for Zambia (sample A14: CNMC- Zambia report, page 27).

By applying the above Judgment resources like “give” “improve” and “help”, Chinese companies are not only showing the outsiders their capability, more importantly, they are proving their positive oversea influence to the various stakeholders. On the one hand, as time goes by, Chinese companies are becoming more and more capable to offer help and make contributions for oversea countries, which simultaneously help upgrade the international image and status of China. To put it more constructive, with the ever-deepening implementation of the “Belt and Road” Initiative, Chinese companies with their ever-growing capability will play a more and more important role in the new arena, they can not only develop themselves but also help others develop, which also means that they will function significantly in propel building a more harmonious society worldwide. On the other hand, they will also make more and more contributions to propel Chinese dream of national rejuvenation, they are fighting to create a newer identity for themselves.

In order to have a further understanding of the alignment made by Chinese

companies concerning overseas social responsibility, the following examples are selected from the CCTV program the “Belt and Road” of “Dreamland, Homeland” so as to provide us with another perspective.

5.2.2.2 PDA Analysis of Judgment Resources in CCTV Program

- 16) Because this kind of stone coated by mud would easily lead to collapse and make construction difficult. They ran into all kinds of problems and difficulties during the construction. By virtue of their rich experience and sound **skills** [Attitude-Judgment: **capacity**], they finally **solved** [Attitude-Judgment: **capability**] all the problems **perfectly** [Attitude-Judgment: **capability**]. Moreover, they appeared very relaxed while telling us about them. But we can imagine how **hard** [Attitude-Judgment: **tenacity**] it would be for them to **overcome** [Attitude-Judgment: **tenacity**] these difficulties in a foreign country. The experience has been obtained through tremendous **efforts** [Attitude-Judgment: **tenacity**] and **hardships** [Attitude-Judgment: **tenacity**], or even at the **cost of life** [Attitude-Judgment: **propriety**](sample A15: China Hi-Speed Group - “Belt and Road” of “Homeland, Dreamland”-293).
- 17) **But for the engineering staff, they actually like the sunny weather with the scorching sun, because it won't affect their construction** [Attitude-Judgment: **tenacity**]. They are **more concerned about the progress of the project before the arrival of the wet season** [Attitude-Judgment: **tenacity**] (sample A16: China Geological Group-“Belt and Road” of “Homeland, Dreamland”-241).
- 18) We would always walk around the site with our elder engineer and elder seniors. They were there every day. **During the morning, afternoon, evening, and even the night shift, they would always be there on the site** [Attitude-Judgment: **propriety**]. It was quite inspirational (sample A17: China Nonferrous Metal Industry's Foreign Engineering and Construction Co Ltd-“Belt and Road” of “Homeland, Dreamland”-332).
- 19) After taking over in 2008, **CWE only spent just five years, and delivered the power plant, solving the lack of electricity, a problem that has haunted the locality for a dozen years**[Attitude-Judgment: **capability**] (sample A18:

China International Water & Electric Corp.-“Belt and Road” of “Homeland, Dreamland”-331).

- 20) If you ask anybody in Bangladesh, Bangla people, what you think of Chinese people? He will say, “yes, they are **good [Attitude-Judgment: propriety]** men. They are very **friendly [Attitude-Judgment: propriety]** to us”. And we practically always say this. We are like **soul mate [Attitude-Judgment: veracity]**, the relationship is **good [Attitude-Judgment: propriety]**. So we think all is positive with Chinese, with Chinese people and with everything. We are **sincere [Attitude-Judgment: veracity]** to each other. (sample A19: Sinohydro Harbor Co., Ltd -“Belt and Road” of “Homeland, Dreamland”-94).

From the above examples, based on the evaluation resources made by the cooperative partners and local staff revealed from the program, we can see that they are making positive evaluations on Chinese companies and Chinese people. The Judgment resources revealed in the examples mostly are Capacity resources like “just spend”, “skills”, “solve”, “perfectly”, which lead to the same truth that Chinese companies have achieved good work overseas with their capability approved by the stakeholders. Besides, there are also resources of Tenacity revealed, resources like “hard”, “overcome”, “tremendous effort” and “hardships” function to make a design of Chinese staff’s hard-working image to achieve the reconciliation and alignment. As there is no shortcut to success, though the “Belt and Road” Initiative has created numerous opportunities for Chinese companies, the real success can’t be achieved without diligent personalities and hard-working qualities. Moreover, there are also Propriety resources made by local people on Chinese people, the resources revealed are “good”, “friendly”, “soul mate”, “positive” and “sincere”. Considering the fact that the process of doing business between companies from different countries is also a process of establishing mutual communication and mutual understanding between people of different nations, in order to achieve successful alignment and reconciliation, it is significant for Chinese staff to have their personal characteristics and principles been recognized. Based on the Propriety evaluation made by the third parties, it is reasonable for us to deduce that Chinese staff have earned recognition in oversea business in that they are thought to be good, friendly and sincere, and also they are accepted as soul mate which shows that they can well understand others and being needed by others. As it is said in China, intelligence can only lead to a small victory, only the moral can lead to great success. In a word, the Judgment resources contribute

to build positive corporate identities constructed by Chinese companies themselves so as to help them align various stakeholders worldwide.

5.2.3 PDA Analysis of Appreciation Resources in the Corpora

Appreciation resources are resources concerning the esthetic evaluation of objects other than people's behaviors. They can also be applied to acquire alignment, the distribution of the resources as well as a general word list is exhibited below.

Feature	Percent	N
APPRECIATION-TYPE	N=2170	
Reaction	17.4%	378
Composition	34.3%	745
Social-valuation	48.2%	1047
ATTITUDE-POLARITY	N=2165	
Positive-attitude	90.3%	1954
Negative-attitude	9.7%	211

Figure 5.6 General Distribution of Appreciation Resources

Table 5.7 General Word List of Appreciation Resources

Appreciation resources	Occurrence	Appreciation resources	Occurrence
safety	99	equal	22
sustainable	94	risk	21
stakeholders	93	benefit	21
mutual	76	transparent	20
comprehensive	74	green	19

Continued			
impact	64	harmony	19
responsibility	62	beautiful	18
health	51	win-win	18
common	48	clean	17
harmonious	42	balance	16
global	41	fair	15
challenge	40	overseas	15
friendship	38	impressive	14
cooperation	37	open	14
quality	34	innovation	14
great	25	stable	13

From the above figure, we can see that among all the Appreciation resources, social-valuation takes the largest part with an occurrence of 1,047 times. Composition and Reaction resources follow behind. In terms of the polarity, 90.3% of Appreciation resources are positive, 9.7% are negative. Appreciation resources are resources about esthetic evaluation on existing phenomenon or entity. In order to have a detailed understanding of the functions of creating positive effect, some representative examples are illustrated below.

5.2.3.1 PDA Analysis of Appreciation Resources in Companies' Oversea CSR Reports

- 21) The most **important [Attitude: Appreciation-social valuation]** resources in this world are people and the environment. As a responsible corporate citizen, we pledge to conduct our operations in a **safer [Attitude: Appreciation-social valuation]**, more **environmentally-friendly [Attitude: Appreciation-social valuation]** and **efficient [Attitude: Appreciation-social valuation]** way in order to strike a **balance [Attitude: Appreciation-composition]**

between energy development and **environmental protection** [Attitude: **Appreciation- social valuation**] (sample A20: CNPC- Kazakhstan report, page 19).

The above example is drawn from Chinese companies' oversea CSR reports. We can see the Appreciation resources exhibited most belong to the Social valuation, Reaction and Composition resources are in smaller percentage comparatively. From the Social valuation resources like "more environmentally friendly", "efficient", "balance between energy development and environmental protection" and "healthy development", we can know that the sound and sustainable development remain top priorities of Chinese companies when they operate overseas. Since many of the contractors along the Silk Road are from countries less developed, the economy in those countries is normally less developed, but the local natural environment is admiring. Therefore, it is extremely important for them to make sure that the construction and development brought by cooperation with Chinese companies will do little harm to their existing gorgeous natural environment. By applying such Social valuation resources, Chinese companies are making positive alignment of the stakeholders to gain their trust and support.

- 22) Kazakhstan is also **home** [Attitude: **Appreciation- composition**] to more than 800 species of animals and 4,700 species of plants. However, **environmental degradation** [Attitude: **Appreciation-reaction**] has greatly threatened the country's **biodiversity** [Attitude: **Appreciation- social valuation**] in recent years (sample A21: CNPC- Kazakhstan report, page 26).
- 23) **Safe** [Attitude: **Appreciation- social valuation**] operation is our top priority. It is the precondition and basis for the company's **long-term** [Attitude: **Appreciation- social valuation**] cooperation with Kazakhstan. We integrate **safety** [Attitude: **Appreciation- social valuation**] management into every aspect of our operations in order to ensure the **safety** [Attitude: **Appreciation- social valuation**] of our employees, partners, and neighboring communities. (sample A22: CNPC- Kazakhstan report, page 27).
- 24) We pursue **equality** [Attitude: **Appreciation-social valuation**], **non-discrimination** [Attitude: **Appreciation- social valuation**], **open recruitment** [Attitude: **Appreciation- social valuation**], and **equal pay** [Attitude: **Appreciation- social valuation**] regardless of nationality, race, sex,

religion or culture. We **prohibit any form of child labor** [Attitude: **Appreciation- negative social valuation**], **forced labor** [Attitude: **Appreciation- negative social valuation**] or **discrimination** [Attitude: **Appreciation- negative social valuation**] (sample A23: CNPC- Kazakhstan report, page 31).

From the Appreciation resources revealed above, there are many Social valuation resources like “safer”, “safer operation”, “safety of employees, partners, and neighboring communities”, “equality”, “non-discrimination”, “open recruitment”, “equal pay”, “prohibit child labor”, and “prohibit discrimination”, from which we see that Chinese companies have chosen to be people-oriented. Considering the fact that with the guidance of “Belt and Road” Initiative, Chinese companies are destined to realize employee localization, Chinese staff have to live and work locally at the same time. As it is said caution is the parent of safety. It reveals that Chinese companies are very cautious in operating overseas so as to be seen as reliable by each individual concerned so as to invade potential risks that may come from anytime. To put it more constructive, in the new era, Chinese companies either state-owned or private are shouldering more and more responsibilities and tend to share a common vision with the Chinese nation in the process of going outside. In a word, by applying such Appreciation resources, Chinese companies are constructing themselves with positive qualities in overseas operations.

The following examples are extracted from the CCTV program the “Belt and Road” of “Homeland, Dreamland”. They are served as the complement data supporting a more comprehensive analysis of PDA on corporate overseas social responsibility.

5.2.3.2 PDA Analysis of Appreciation Resources in CCTV Program

- 25) The **Chinese technology** [Attitude-Appreciation: **social valuation**] and the **Chinese standards** [Attitude-Appreciation: **social valuation**] are also influencing the world step by step. Because of the **common** [Attitude-Appreciation: **social valuation**] goal and vision, the colleagues from two countries can get on quite **harmoniously** [Attitude-Appreciation: **composition**] and **different cultures influence mutually and imperceptibly** [Attitude-Appreciation: **reaction**](sample A24: Liu Gong Dressta

Machinery-“Belt and Road” of “Homeland, Dreamland”-episode 285).

- 26) With the **integration [Attitude-Appreciation: social valuation]** of the culture, they promote the **healthy [Attitude-Appreciation: social valuation]** development of the enterprise and enhance the **affection [Attitude-Appreciation: social valuation]** between China and the local people. Through the building of the “Belt and Road” Initiative, more Polish people will know about China through Chinese enterprises and strengthen cooperation for **common [Attitude-Appreciation: social valuation] development** (sample A25: Liu Gong Dressta Machinery-“Belt and Road” of “Homeland, Dreamland”-episode 285).

Compared with the Appreciation resources analyzed above, the Appreciation resources here are revealed from either the interviewer of the program or the local workers. We can see there are also Social valuation resources like “common goal”, “common vision”, “integration of the culture”, “long-term cooperation”, “affection between China and local people” and “common development”, which have veiled the expectations of Chinese companies. It is clear that the expectations revealed by Chinese companies are similar to the expectations of the “Belt and Road” Initiative.

- 27) Qi Lin tells us that as an island country with **gorgeous landscape [Attitude-Appreciation: social valuation]**, Sri Lankans are used to natural scenery, and instead admire these images of industry. Aside from its **grandiose appearance [Attitude-Appreciation: social valuation]**, the Puttalam Coal Plant is extremely **important [Attitude-Appreciation: reaction]** to the entire nation. It is the **only [Attitude-Appreciation: reaction]** coal power plant in Sri Lanka, and is currently the **largest [Attitude-Appreciation: reaction]** coal power plant project between China and Sri Lanka. It's total installed capacity can cover over 50% of Sri Lanka's power grid (sample A26: China Machinery Engineering Corporation-“Belt and Road” of “Homeland, Dreamland”-116).
- 28) At the time, Mr. Zhang visited the site with me, and witnessed it, how at the time, we didn't have this building we're in, and the dorms and offices might still have been in tents or in containers. Everyone lived in those **harsh conditions [Attitude-Appreciation: social valuation]** and **worked hard that we created an astounding power plant here finishing the task**

[Attitude-Appreciation: reaction] that was given to us (sample A27: China Machinery Engineering Corporation-“Belt and Road” of “Homeland, Dreamland”-116).

The Appreciation resources revealed in the program consist of “grandiose appearance”, “largest”, “only”, “harsh conditions”, and “astounding”, which show us that the power plant constructed by Chinese companies in oversea countries not only functions significantly but also has esthetic value in local people’s eyes from the esthetic perspective. Since Sri Lanka is a country with gorgeous landscape, the power plant constructed there is perceived as a modern building with grandiose appearance. Meanwhile the power plant made little pollution to the local beautiful natural environment, which once again proves that Chinese companies have done a great work overseas.

29) The automated assembly line of the workshop combines the **most advanced** **[Attitude- Appreciation: social valuation]** Liu Gong manufacturing process and the **best mode of operation****[Attitude-Appreciation:social valuation]**(sample A28:Liu Gong Dressta Machinery-“Belt and Road” of “Homeland, Dreamland”-episode 285).

30) Liu Gong Poland Branch is one of the **most powerful enterprises****[Attitude-Appreciation: social valuation]** in Poland. Being an intern here means being exposed to **cutting-edge technologies** **[Attitude-Appreciation:social valuation]**(sample A29: Liu Gong Dressta Machinery-“Belt and Road” of “Homeland, Dreamland”-episode 285).

Meanwhile the Appreciation resources like “the most powerful”, “the most advanced”, and “cutting-edge technologies” revealed that Chinese enterprises have left positive impression in oversea countries, which will help polish their corporate reputation.

To sum up, based on the PDA analysis of Attitude resources revealed from Chinese companies’ oversea CSR reports and the CCTV program “Belt and Road” of “Homeland, Dreamland”, we can conclude that Chinese companies are making a lot of effort to align various stakeholders worldwide. First, by applying Affect resources, they construct themselves as responsible, considerate, ethical and committed, designing good Chinese companies’ images. Second, by applying Judgment resources, they are exhibiting their real capabilities, kindness and sincerity. Third, by applying Appreciation resources, they show to the outsiders their achievements. The positive

influence Chinese companies have earned in overseas operations can be deduced from the linguistic resources. First, as the deepening implementation of the “Belt and Road” Initiative, Chinese companies have accumulated rich experience and expertise, which contribute to their long-term development in the future. Second, as more and more Chinese companies go outside, Chinese staff have more and more opportunities to develop themselves in overseas countries, the social value they have gained are far more stronger than the personal value, which also teaches us that in the current stage, nothing can be more important than having a global view and a down-to-earth working attitude. Only through constant practice and challenges, can we progress. Third, in the process of working overseas, the commitment that Chinese companies bear in mind is the core connotation of “Common destiny of Mankind”, which shows us the close relationship among political wisdom, economic development and social harmony. There is no denying that China’s great design as “Belt and Road” has kept strengthening the unity of Chinese people themselves.

5.3 PDA Analysis of Engagement Resources in the Corpora

Companies’ overseas CSR reports are not only reports disclosing the corporate overseas performance, they also serve as the dialogue between corporations and vital stakeholders. As monogloss is not concerned with any voices, therefore, there is no room for its discussion, Heterogloss under Engagement system is the study focus in this part. After the annotation, retrieve and calculation, the statistics of Engagement system is exhibited in the following (Figure 5.8).

Feature	Percent	N
ENGAGEMENT-TYPE	N=1705	
Contract	33.7%	574
Expand	66.3%	1130

Figure 5.8 The General Distribution of Engagement Resources

There are two sub categories under Heterogloss, they are Contract and Expand respectively. In order to strengthen our understanding, let’s turn to the logic of dialogism revoked by Engagement. It is assumed that dialogue can not only be understood as the conventional form as direct, face-to-face and verbal communication between persons, in a broader sense, it means verbal communication of any type, such

as a book, a printed verbal performance, responding to something, affirming something, anticipating possible responses and objections, seeking support, and so on(White, 2001). They are the resources providing the means by which speakers/writers adjust and negotiate the arguability of their propositions and proposals. To be specific, they are the means by which any utterance, whether in single-party discourse or multi-party discourse, can be construed so as to reveal its inherent dialogistic potential, that is to say, its location and functionality with reference to past, present, and future processes of communicative exchange. Thus by the use of these resources, the terms of the arguability of any utterance can be varied by adjusting the dialogistic status of the utterance, by varying the way in which it is positioned to engage with past, present or future communicative exchanges.

5.3.1 PDA Analysis of Contract Resources in the Corpora

Contract refers to the effort spent by speakers in restricting the dialogic space, which is realized by rejecting or advocating certain propositions. It is theoretically referred to as Disclaim and Proclaim. The following is the distribution of Contract resources revealed in Chinese companies' CSR discourses as well as a general word list.

CONTRACT-TYPE	N=574	
Disclaim	25.96%	149
Proclaim	74.04%	425

Figure 5.9 The General Distribution of Contract Resources

From the above figure, it is known that Proclaim resources take a larger proportion than Disclaim resources. Disclaim resources occupy a proportion of 25.96% with an occurrence of 149 times, while the Proclaim resources take up 74.04% with an occurrence of 425 times.

Table 5.9.1 A General Word List of Contract Resources

5.3.1.1 PDA Analysis of Disclaim Resources in Companies' CSR Reports

Disclaim is evaluated by Deny and Counter-Expect. In this aspect, we are concerned with resources by which some prior positions or utterances are invoked so that they can be rejected, replaced or dismissed as irrelevant. In order to have a further

understanding, some representative examples are illustrated as follows. Since the examples are extracted from different sources, so the examples selected from the companies' CSR reports and those from the CCTV program the "Belt and Road" of "Homeland, Dreamland" will be analyzed separately in order to complement each other thus to be more comprehensive.

- 1) Although she was **not** [Engagement-Heterogloss: Disclaim-deney] seriously injured, the LPG project management took the matter very seriously and immediately launched an investigation (sample E1: CNPC- Indonesia report, page18)

From the above example, the Disclaim resources revealed are "not seriously injured". The denial "Although she was not seriously injured" is clearly dialogic in the sense that it presents or invokes itself as responding to the claims that "If she was seriously injured". The company informs the outsiders that there will be serious treatment of any accidents serious or not serious, which are paid great attention to by project managers, thus create a responsible and careful corporate image to the stakeholders.

- 2) Some of our employees have been working abroad for more than 13 years. It is not that they do **not** [Engagement-Heterogloss: Disclaim-deney] miss their motherland or their families. They make such sacrifice for their noble mission and the development of the enterprise. They work hard without complaints or regrets (sample E3: CNMC- Zambia report, page 40).

- 3) **Despite** [Engagement-Heterogloss: Disclaim-counter-expect] the cultural differences between China and Zambia, we know what they feel by putting ourselves in their shoes. We treat them well and sincerely create favorable conditions for them, and in return, they love the company deeper and pursue common development with the company (sample E4: CNMC- Zambia report, page 37).

The denial revealed from the above example "it is not that they do not miss their

motherland or their families” is dialogic in that it revokes and intensifies the position that “they do miss their motherland and families”. “Despite” also works to disclose the cultural difficulties Chinese staff have met in their oversea operations, it functions to highlight the sacrifice they made as well as the merits they embrace. In this way, the Chinese company informs the outsiders that their Chinese employees have made great sacrifice in conducting their obligations, making the outsiders know that they are very responsible in oversea countries like Zambia, which will help Chinese companies form a good corporate image and help them gain the support of local customers, local communities and local government.

- 4) CNMC may **not** [Engagement-Heterogloss: Disclaim-deney] have achieved so much in Zambia **but** [Engagement-Heterogloss: Disclaim-deney] for the attention, guidance, and support from governments of both countries, the hard work of its Chinese and Zambian employees, and the care and support of the local communities (sample E2: CNMC- Zambia report, page 3).
- 5) **However** [Engagement-Heterogloss: Disclaim- counter-expect], most of the oil and gas fields in the region are located in places where the natural environment is relatively vulnerable, especially in rainforest areas...The government of host countries and the local people impose stringent requirements on the environmental friendliness of oil operations, with harsh punishments..Since we the day we entered Latin America, we have been paying close attention to our HSE work...we continuously improve our HSE system and enhance our HSE culture, with impressive performance being achieved (sample E5: CNPC - Latin America, page 6).

The denial “CNMC may not have achieved so much” and the denial “However, most of the oil and gas fields in the region are located in places where the natural environment is relatively vulnerable with impressive performance being achieved” is dialogic in that it presents itself as recognizing to the belief that “ though the oversea environment is vulnerable, the requirements in all aspects are so strict and serious, the

Chinese companies have achieved so much”, demonstrating the achievements they have made as well as showing the capabilities in overcoming challenges.

5.3.1.2 PDA Analysis of Disclaim Resources in CCTV Program

The following examples are selected from the CCTV program the “Belt and Road” of “Homeland, Dreamland” serving as the complement to the PDA analysis of Chinese companies oversea social responsibilities.

- 6) Talking about SRU unit, I think it was very good work, very fast work, and we finished it in time. And I think very good quality. You can say that everybody was shocked that NFC could finish the work very fast. It was very fast. The organization was very good for this work. Hour to hour **not [Engagement-Heterogloss: Contract-deney]** day by day. And as I know now, some Russian company wants to take the experience from NFC, see how they could do this work so fast (sample E6: NFC “The Belt and Road” of “Homeland, Dreamland”-episode 322).
- 7) We Chinese are doing things overseas **not [Engagement-Heterogloss: Contract-deney]** just for ourselves. To be honest, when we know each other well enough, we can really connect. We are getting closer and closer(sample E7:).
- 8) **But [Engagement-Heterogloss: Contract-deney]** after a few months of getting along with their colleagues, during which they had fun together and worked together(sample E8:NFC “The Belt and Road” of “Homeland, Dreamland”-episode 322).
- 9) Kuma tells us that after the power plant was built, he **rarely [Engagement-Heterogloss: Contract-deney]** saw smoke coming from the smoke stacks, and the local ocean waters and the number of fish haven’t changed. The only thing that has changed has been the price of electricity (sample E9: China Machinery Engineering Corporation “The Belt and Road” of “Homeland, Dreamland”-episode 116).
- 10) Yu Qiang is a good manager, we often exchange views, sometimes we would debate about something, **but [Engagement-Heterogloss:**

Contract-denial] we can always reach the common consensus. Thanks to them, we completed the construction project of the hydro power plant. Yes, we are Party A and Party B, **but [Engagement-Heterogloss: Contract-denial]** we treat each other as friends (sample E10: CWE-“The Belt and Road” of “Homeland, Dreamland”-episode 331).

The Disclaim resources revealed in the above examples from the CCTV program are “hour to hour, not day by day”, “not just for themselves”, “but after a few months’ getting along with their colleagues”, “rarely saw smoke coming from the smoke stacks” , “but we can always reach the common consensus”, as well as “we treat each other as friends”. First, based on the “not hour to hour, but day by day”, it is known to us that the speed of Chinese companies’ construction is absolutely efficient, which makes local partners feel surprised and amazed. To put it in a constructive way, it implicitly conveys to the outsiders that Chinese companies are responsible and ethical in operating overseas, while compared with conducting business normally, they choose to get tasks done with quick speed and quality, which shows that they keep achieving extraordinary with firm belief and strong determination. The unity of the Chinese staff as well as the firm commitment are clearly exhibited, making outsiders believe that Chinese companies can be trusted, they are fighting to fulfill responsibility and ethics with their own styles. Second, from the “not just for themselves” and “rarely saw the smoke”, the positive effect is achieved to impress stakeholders that that Chinese companies care more about local needs, they would like to satisfy their needs in a perfect way even if they have to make a lot of sacrifice to achieve that. Moreover, based on the “but after a few months’ getting along with their colleagues, “but we always reach the common consensus” and “but we treat each other as friends, the constructive meaning conveyed is that Chinese staff are sincere in that they are seen as friends by cooperative partners, as it is said that a friend in need is a friend indeed. Considering that all projects easy or

difficult are contemporary with a deadline always, while friendship has no boundaries and can be forever lasted. In this way, Chinese companies are aligning the various stakeholders and are trying to establish a friendly interpersonal relation with them to appear to be harmonious.

5.3.1.3 PDA Analysis of Proclaim Resources in Companies' Oversea CSR Reports

Proclaim, which is concerned about the formulations which can be interpreted as heading off contradiction or challenge from potential dialogic respondents. They are meanings which increase the interpersonal cost of any such contradiction by adding additional support or motivation for the current proposition/proposal (White, 2001). There are many kinds of classifications under Proclaim, though named different, the resources contained are unchanged. Therefore, Concur, Pronounce, Endorse, and Justify will be analyzed as Proclaim resources. Concur refers to the resources expressing writer's likelihood on something including resources like "I'm certain that...", "I suspect...", Pronounce refers to the resources pronounced by the writer, such as "I contend that...", "I would say that...", "indeed", "the fact is...", etc. Endorse refers to resources like "X shows that...", "the X proves that...", "X demonstrates that...", etc. Justify refers to the process that a proposition is justified when reasons are given, including resources like "because", "since", "the reason for", and so on, and flags the proposition as contentious and requiring justification. In order to have a further understanding, a detailed analysis of examples will be illustrated below.

- 11) While gaining efficiencies remains our target in 2016, we are steadfast in our commitment to manage our impacts successfully and to be a valued partner in our communities. **Of course [Engagement-Heterogloss: Proclaim- concur]**, none of this is possible without first ensuring the safety of our people (sample E11: MMG- Sustainability report, page 3).
- 12) Among our many efforts, we avoided building camps and limited construction area. We also tried, whenever possible, not to occupy farmland and other fertile areas. Action was immediately taken to remedy any damage caused.

While digging pipe ditches, we were **certain** [Engagement-Heterogloss: Proclaim-concur] to return the topsoil to its correct place (sample E12: CNPC- Kazakhstan, page 26).

- 13) **In order to** [Engagement-Heterogloss: Proclaim-justify] help local residents to build livable and comfortable new home, PowerChina workers spared no effort to improve the design and construction details based on conditions. In Banda Aceh, there are many residential projects under support by other countries, come of them are plank buildings, which are leaking or collapsed, causing many complaints. Only China-aided projects never have any such complaints...Chinese workers built the Village as if it was their homes (sample E15: PowerChina Indonesia sustainability report, page 26).

By applying “Of course”, “we were certain that”, the writer directly interpolates himself into the text as the explicitly responsible source of the utterance. It is contended clearly by the writer that the company is steadfast and effective in managing their impacts. Through such declaration, the writer has to be responsible for the utterance, which may be given rise to or increase the interpersonal cost of any rejection/doubting of the utterance in future communicative exchanges, rendering a direct challenge to the writer’s dialogic position. Through such a strategy, the writer will face the possibility of rejection, and integrates such possibility, and thereby acknowledge the dialogic diversity of meaning made by any imagined respondent in socially diverse context. As it is said in China time and practice are the best touchstones. By such inform made, Chinese companies show great confidence in undertaking the checkout from the various stakeholders.

- 14) When digging the pipe ditch, we created a temporary passage for animals **so that** [Engagement-Heterogloss: Proclaim-justify] their natural movements to and from water sources would be unimpeded. Before backfilling a pipe ditch, we made sure [Engagement: Proclaim-pronounce] there were no trapped animals, rescuing any we found in harm’s way (sample E13: CNPC- Kazakhstan, page 26).

- 15) NFCA donated sewing machines to Chambishi Women Employment Program.

It aims to help local women acquire a skill and a long-term working opportunity **so as to** [Engagement-Heterogloss: Proclaim-justify] achieve economic independence, upgrade the standard of living for themselves and their families, and realize their own value (sample E14: CNMC- Zambia,page 54).

By using “so that”, and “so as to” which belong to Judgment resources, the Chinese company disclosed its donation practices, the aims of donation, and further conveyed the readers the reasons of engaging in such practices, showing readers a clear logic persuading readers to realize their good deeds, making other possible challenging viewpoints lose their stand. Therefore, the company not only acquires the legitimacy but also establishes a good corporate image as caring for women group in Zambia, caring about local staff’s economic independence, the standard of living as well as their own value.

5.3.1.4 PDA Analysis of Proclaim Resources in CCTV Program

The above examples are selected from the corporate CSR reports, in order to have a more objective view of Chinese companies’ stand, it is also necessary to conduct an analysis on the data drawn from the CCTV program. Some representative examples are illustrated below.

16) Everyone lived in those harsh conditions and worked together for years for a common goal, and it was with everyone’s hard work that we created an astounding power plant here, finishing the task that was given to us. Everyone feels like the power plant has reaped great rewards. This is a mark on everyone that **will** [Engagement-Heterogloss: Proclaim-pronounce] last their entire lives. So you all reflect fondly on this period of time and the feelings you accumulated during this period of time(sample E16: China Machinery Engineering Corporation “The Belt and Road” of “Homeland, Dreamland”-episode 116).

17) Preparing material hurriedly in the wet season is to **ensure** [Engagement-Heterogloss: Proclaim-concur] the project progress in the best construction season. We believe people **will** [Engagement-Heterogloss:

Proclaim-pronounce] reap the harvest of their hard work(sample E17: Sinohydro Harbor Co., Ltd “The Belt and Road” of “Homeland, Dreamland”-episode 94).

18) **Because [Engagement-Heterogloss: Proclaim-justify]** the hottest time in Myanmar, is from March to May every year, to save the cost, after all, 24-hour electricity generation costs quite a lot. Often sometimes, at 4:00 or 5:00 in the morning many employees wake up due to hotness. They all take a walk in the yard. People in groups that we see all wake up early in the morning due to hotness (sample E18: Third Bureau of CCCC- “The Belt and Road” of “Homeland, Dreamland” -episode 11).

19) However, workers of all ages and both sexes would always take their tasks very seriously and **would [Engagement-Heterogloss: Contract-proclaim]** allow no negligence. When it was below minus 35 degrees centigrade, you would feel as if cold was cutting your face(sample E19: NFC “The Belt and Road” of “Homeland, Dreamland”- episode 322).

According to the Proclaim resources revealed from the above examples selected from the CCTV program, first, the Proclaim resources “ensure the project progress” “in order to help local residents to build livable and comfortable new home”, “would allow no negligence” and “because the hottest time”, informs us the root of Chinese speed and Chinese quality. In other words, regardless of great difficulties set by natural conditions, the Chinese staff can always keep commitment to their tasks, exhibiting great endurance of hardships. Second, based on the resources “will last their entire lives”, and “will reap the harvest of their hard work”, it is shown that the oversea working experience has become valuable wealth of each Chinese staff. To put it more constructive, employees are the most valuable resources of the companies, whose growth and development are closely related with the employees’ growth and development. The good qualities nurtured, the rich experience accumulated, and the spirit tempered are all key factors for Chinese companies to achieve more and more success in the forthcoming years.

To sum up, as it is illustrated above, Contract consisting Disclaim and Proclaim

resources are used to either reject or directly challenge alternative views, and seek to constrain possible dialogic divergence by overtly and strongly indicating their personal investment in the current proposition, therefore, the writer can make the terms of arguability adjusted so that any challenge or questioning of the current proposition puts more at stake interpersonally, closing down the space for dialogistic diversity, closing down the dialogistic diversity. By restricting dialogic space, Chinese companies are constructing themselves positively as they are playing a significant role in the world stage, making great contributions to constantly enhance the “Common Destiny of the Mankind”, mutual development and world peace.

5.3.2 PDA Analysis of Expand Resources in the Corpora

Compared with Contract resources which limit the dialogic space, Expand resources work to open dialogic space. It is mainly concerned with the resources expressing possibility or likelihood. Therefore, the subcategories Entertain and Attribution will be analyzed separately in this chapter.

Feature	Percent	N
EXPAND-TYPE	N=543	
Entertain	74.4%	404
Attribute	25.6%	139

5.3.2.1 PDA Analysis of Entertain Resources in Companies' Oversea CSR Reports

Entertain resources within Expand are mainly concerned with resources function to open dialogic space. From the above figure, we can see that modal words are applied most in the companies' overseas CSR reports. They are mostly used to make predictions, to exhibit possibilities and necessities. In order to have a clear understanding of the positive effect, representative Entertain resources as “will”, “can”, “must” and “should” will be illustrated in detail with representative examples in the following.

1. The PDA Analysis of “will” in companies' overseas CSR reports

- 1) The “Belt and Road” Initiative is a systematic project. Focusing on Asian countries, and developing the land and maritime economic cooperation corridor as the support, it aims to build on the transportation infrastructure and the construction financial platform as the impetus, promote Asia's connectivity that **will[Engagement-Heterogloss: Proclaim-entertain]** be jointly built through consultation to meet the interests of all in an equal and mutually beneficial way by utilizing people-to-people exchange as the link, and creates a highly integrated connectivity

network(sample E20: China Power Indonesia Report, page 4).

- 2) CNPC **will** [Engagement-Heterogloss: Expand-entertain] continue to uphold the concept of mutually beneficial development and work with our Sudanese partners to enhance cooperation and strengthen between the two countries. We firmly believe that Sino-Sudanese petroleum cooperation **will** [Engagement-Heterogloss: Proclaim-entertain] continue to expand opportunities for mutual development (sample E21: CNPC, Sudan Report, page 3).
- 3) An Australia proverb says: people without dreams get lost. China Minmetals **will** [Engagement-Heterogloss: Proclaim-entertain] continue towards the global of “promoting social progress and advancing world harmony”, collaborate with its Australian stakeholders to achieve mutual benefit and win-win outcomes by continuously improving its ability to create sustainable values, and build its enterprises in Australia as models of global operations and fulfilling social responsibility (sample E22: China Minmetals Corporation, Australia report, page 3).

From the above examples, it is clear for us to deduce that “will” in the above examples share a common function, which is to make futurological predictions, namely “Asia’s connectivity will be jointly built”, “opportunities for mutual development will be expanded”, as well as “social progress and world harmony will be promoted”. While, the predictions made by Chinese companies are well beyond the companies’ own sphere of action to extend to propositions about the Asia’s connectivity, social progress and world harmony. The positive effect achieved by applying such resources can be summarized as addressing powerful interest groups, especially local governments. According to Fairclough (2003),

The power of making futurological predictions is a significant one, because injunctions about what people must do or must not do now can

be legitimized in terms of such predictions about the future, and extensively are (Fairclough, 2003, p167)

Clearly, futurological propositions can help justify certain courses of action in the present, while to be effective in their legitimating function, futurological predictions need to be grounded in the authority, real or perceived, of the person or institution making such predictions (Matteo Fuoli, 2011). The authority that Chinese companies generally grounded is the Chinese government as well as its design as the “Belt and Road” Initiative. On the one hand, it shows the close relationship between Chinese government and Chinese companies, especially stated-owned enterprises. On the other hand, since there is positive trend to show that China’s ‘Belt and Road’ Initiative are being recognized by more and more countries in the world, through using such resources, the legitimization and justification of Chinese companies can be enhanced, meanwhile helping establish their authority in the world arena by framing themselves as responsible partners, positive constructors, supporters of mutual development and world peace, which will help make Chinese companies as reliable and consistent thus align outsiders.

Besides of applying “will” to make futurological propositions to make alignment and reconciliation, “will” as resource of making future predictions, is also applied by Chinese companies to make realistic predictions concerning the specific progress of projects as well as impacts of certain practice, which are illustrated in the following examples.

- 4) In the next five years, we **will** [Engagement-Heterogloss: Proclaim-entertain] carry forward projects and plan to increase daily oil output around 200,000 barrels (sample E23: CNPC, Indonesia, page 21).
- 5) The project **will** [Engagement-Heterogloss: Proclaim-entertain] be completed in three phases. The second phase, which **will**[Engagement-Heterogloss: Expand-entertain] process 2 billion cubic meters of natural gas annually, was completed and

became operational at the end of 2007. The upgrading **will** [Engagement-Heterogloss: Proclaim-entertain] include the addition of heavy oil catalytic cracking and reforming and natural gas absorption and fraction facilities (sample E24: CNPC Kazakhstan Report, page 16).

- 6) Further we have introduced a business management system which now incorporates a risk management framework that has been modeled on the international risk management standard ISO 31000. This new framework **will** [Engagement-Heterogloss: Proclaim-entertain] ensure risk management practices are continuously improved upon and robust controls are implemented to manage exposure and prevent unplanned events at all of our sites (sample E25: China Minmetals, Australia report, page 8).

From the above examples, we can see that “will” is used to express the expected results of overseas projects, based on the qualitative analysis, the results are all positive, including increasing daily oil output, upgrading project operational process and ensuring risk management practice. The positive effect achieved is to softly persuade the outsiders that what Chinese companies do in other countries are contributing and advanced operation behaviors, asserting positive impact on the local countries like Indonesia, Australia and Kazakhstan.

- 7) A zero harm policy is strongly endorsed at each of the Australian operations and all sites achieved ISO 14001 certification and top quartile performance against a sustainability index. While these results are promising, we **will** [Engagement-Heterogloss: Proclaim-entertain] continue to strive for further improvements (sample E26: China Minmetals Australia Report, page 8).
- 8) Despite the challenges posed by the global economic downturn, we **will** [Engagement-Heterogloss: Proclaim-entertain] continue to adhere to a unified code of conduct and standards in all business regions across the world to achieve comprehensive, balanced and

sustainable development (sample E27: CNPC Kazakhstan Report, page 2).

- 9) We **will** [Engagement-Heterogloss: Proclaim-entertain] continue to attach great importance to our Indonesia stakeholders, and continuously expand the scale of our oil & gas cooperation, to facilitate Indonesia's sustainable socio-economic development (sample E28: CNPC Indonesia Report, page 5).

As “will” functions to predict on the one hand, it also functions to hedge, which can be understood in the above examples. As written in the report, Australian operations strongly follow the policy of zero harm, Actually, Chinese companies can make a clear list of their improvements of abiding by the zero harm policy, which will directly stop any other confrontations and achieve persuasion. While the reason for Chinese companies to choose to apply “will” is that they are hedging their responsibilities, leaving options open for the possibility that they may fail to conform to the local national policies. “Will” in the other two examples work in a similar way. Considering the fact that everything has two sides, and risks exist everywhere. Though making hedges, Chinese companies are preventing themselves from any potential risks, thus contribute to their long-term overseas development. Considering the frequent occurrence of standards, it is found that certain Chinese enterprise like China Minmetals will disclose its standard as ISO 14001 explicitly and directly, while other enterprises will use “certain unified standard” instead. Though making hedges, Chinese companies are preventing themselves from any potential risks, thus contribute to their stable overseas development.

2. The PDA Analysis of “may” in companies’ oversea CSR reports

- 10) As we know, Latin America is a mature market for oil and gas investments. However, most of the oil and gas fields in the region are located in places where the natural environment is relatively vulnerable, especially in rainforest areas. Petroleum extraction **may** [Engagement-Heterogloss: Proclaim -Entertain] exert a negative impact on the local flora, fauna and indigenous people

(sample E29: CNPC Latin America Report, page 8).

11) China Minmetals commits itself to identifying, controlling and eliminating the safety and health risks which our corporations **may** [Engagement-Heterogloss: Proclaim-Entertain] cause to its employees, community and the environment, and pursue an operating goal of “zero accident, zero harm and fatality free” (sample E30: China Minmetals, Australia, page 9).

12) To protect local culture from the impact of Century’s mine operations, the mine employs a number of “Cultural Protection Observers” who have profound understanding of its local culture and customs. They supervise the impact that **may** [Engagement-Heterogloss: Proclaim-Entertain] be caused by the mining operations upon the culture and landform of the community and make suggestions on improvement (sample E31: China Minmetals, Australia Report, page 50).

13) Golden Grove Mine understands that its own operations **may** [Engagement-Heterogloss: Proclaim-Entertain] produce some impact on the economy, life and culture of the local community. To minimize this impact, it recognizes the need to strengthen exchanges and communication with the indigenous community to increase employees’ understanding of local culture and life (sample E32: China Minmetals, Australia Report, page 50).

Based on the above examples, it is clear for us to see that “may” are mostly applied in disclosing Chinese companies’ overseas operational impacts, especially negative impacts on local communities, local employees, local culture, local economy as well as local life. “May” as modal word expressing possibilities is applied working to implicitly disclose Chinese companies’ negative footprint, which is hardly avoided especially in the oil and gas industry. The positive effect achieved is to prove to the outsiders the truthfulness of the reports, which should cover both the contributions

and damages to show comprehensiveness, so as to establish companies' responsibility of being ethical and realizable to the general public.

3. The PDA Analysis of “must” in companies' oversea CSR reports

14) We are faced with difficulties in adapting different national conditions and social culture in Indonesia. The Indonesian government's localization policy requires that we **must** [Engagement-Heterogloss: Proclaim-Entertain] hire local employees at a ratio of 1: 10, adding to the difficulty of Chinese companies' in recruiting and training employees. Indonesia is a country with large Muslim population and its different religion and culture present another major challenge (sample E33: PowerChina, Indonesia Report, page 14).

15) The technical upgrading of the refinery was launched after it was approved by all of the stakeholder, including KazmunaiGas. The process is expected to take three years, during the existing refining capacity **must** [Engagement-Heterogloss: Proclaim-Entertain] be maintained (sample E34: CNPC, Kazakhstan Report, page 19).

16) The company has designed a multi-step process to select the best contractors. First, selection of contractors **must** [Engagement-Heterogloss: Proclaim-Entertain] go through public bidding. This takes into account not only quality and price, but also the ability to meet HSE requirements (sample E35: CNPC, Kazakhstan Report, page 33).

17) Second, the contractor **must** [Engagement-Heterogloss: Proclaim-Entertain] consent to the company's management rules and have its own for the people performing the job. Finally, the equipment of the contractors must pass quality assessments (sample E36: CNPC, Kazakhstan Report, page 33).

“Must”, as an Engagement resource expressing necessity, has been applied most in describing Chinese companies' obligations in other countries for various

stakeholders. Based on the above examples, first, we can see that by disclosing the local hiring ratio as well as the difficulties, on the one hand, the subject Chinese company can establish itself as an expert who treats the number of local new hires seriously and accurately. On the other hand, by disclosing challenges it has to overcome, the company once again aligns the outsiders by framing itself as strongly responsible and considerate. Second, “must” are applied in disclosing information concerned with the companies’ contractors. From the “must” revealed, we can deduce that there is a relationship of power and control between the Chinese company and the contractors. While the Chinese company can also make a list of items that the contractors have achieved and the items that they fail to perform, the reason works in a similar way with “will”, dialogic options open for the possibility that the contractor may fail to perform as required. Moreover, based on the resources revealed, it is found that the different religious beliefs and culture have pose challenges for oversea management of either local employees or contractors.

4. The PDA Analysis of “should” in companies’ oversea CSR reports

18) Our company fully recognizes its responsibility as a corporate citizen. The wealth of a company comes from society and we **should** [Engagement-Heterogloss: Proclaim-Entertain] give something back to society (sample E37: CNPC, Kazakhstan Report, page 4).

19) The company **should** [Engagement-Heterogloss: Proclaim-Entertain] also pay attention and respond to the aspirations and needs of all the stakeholders and encourage them to be part of the fulfillment of its economic, environmental and social responsibilities so that they can grow together with the company (sample E38: CNPC, Kazakhstan Report, page 11).

20) We have been adhering to the social responsibility concept that we **should** [Engagement-Heterogloss: Proclaim-Entertain] “make every project built by us a success so as to promote local development”. (sample E39: China Nonferrous Metal Mining Co.,

Ltd, 2011 Zambia Report, page 2).

21) When implementing the “going abroad” strategy, Chinese enterprises **should** **[Engagement-Heterogloss: Proclaim-Entertain]** focus on their own development and also promote the economic development of the host country so as to achieve a win-win result and achieve the leap-forward growth from acquiring short-term interests to long-term circular benefits. Only by taking root in Africa and merging into the local society can enterprises develop vigorously and fruitfully (sample E40: China Nonferrous Metal Mining Co., Ltd, 2011 Zambia Report, page 49).

Based on the above examples, first, “should” applied in the Chinese companies’ reports help build them into companies bearing social responsibility that is widely upheld by the various stakeholders worldwide, which consists of completing successful projects, giving something back to the society, and respond to all stakeholders’ aspirations and needs. Such assertions work to justify and legitimize their current behaviors of conducting social responsibilities. Besides, from the final example, “should” is applied to convey experience to other Chinese companies. Since the Chinese company is a state-owned enterprise, inheriting advantages in terms of skill, capacity as well as experience. As the “Belt and Road” Initiative deepens each day, there are also private Chinese companies pursuing overseas development. They are certain to encounter various challenges from various aspects, they need to learn from valuable experiences. By making such proposition, the Chinese company can align concerned stakeholders and reinforce its identity as expert and authority that can be trusted.

To sum up, the positive effect achieved by the Chinese companies of making positive design and alignment can be perceived from the above analysis on modal words, which are mostly applied in the companies’ reports. By opening dialogic space, first, Chinese companies justify their current behaviors. Second, they successfully hedge their negative impact caused by their operations. Third, they construct themselves as responsible, authoritative, considerate and ethical. All these work to

polish their corporate images and reputation worldwide.

5.3.2.2 PDA Analysis of Entertain Resources in CCTV Program

Based on the above figure, we can know the most frequently Entertainment resources revealed in the program are also modal word, in which the ones with highest occurrence are “can”, “must” and “will”. In order to have a comprehensive understanding of the positive effect achieved by Chinese companies in terms of overseas social responsibilities, typical Entertainment resources in examples extracted from the CCTV “Belt and Road” of “Homeland, Dreamland” are illustrated below.

1. PDA Analysis of “can” in CCTV program “Belt and Road” of “Homeland, Dreamland”

22) The work experience in Liu Gong enables him to witness the strong strength of China as a great power of science and technology.

The Chinese technology and the Chinese standards are also influencing the world step by step. Because of the common goal and vision, the colleagues from two countries **can [Engagement-Heterogloss: Expand-Entertain]** get on quite harmoniously and different cultures influence mutually and imperceptibly(sample E41: Liugong Dressta Machinery- “The Belt and Road” of “Homeland, Dreamland”-episode 285)

23) It's their first coal power plant, so a process is required for gathering, development, and training of the corresponding employees. As this process continues, and they gather more training and experience, they **can [Engagement-Heterogloss: Expand-Entertain]** gradually take over the operations of the power plant(sample E42: China Machinery Engineering Corporation- “The Belt and Road” of “Homeland, Dreamland”-episode 116).

24) He said that this is the largest coal plant project in their country, and is also the first. And this plant **can [Engagement-Heterogloss: Expand-Entertain]** provide up to 50% of their power, so it **can**

[Engagement-Heterogloss: Expand-Entertain] provide enormous support for their nation's electricity (sample E43: China Machinery Engineering Corporation- "The Belt and Road" of "Homeland, Dreamland"-episode 116).

From the above examples, it is clear for us to see that "can" as a modal word expressing possibility has been revealed in the program concerning matters of local harmonious relationship among colleagues as well as the expected results of certain projects. The positive effect achieved can be summarized as the follows. First, from the "can" revealed in describing harmonious relationship among colleagues, Chinese companies justify their previous propositions that "Chinese technology and Chinese standards are influencing the world step by step, and there is a common goal and vision between Chinese companies and other foreign companies", which can align more stakeholders and help Chinese companies win more trust in the world arena. Meanwhile, "can" revealed in the other two examples work in the same way. They help justify the achievements and significance of the plant to the country and nation.

2. PDA Analysis of "must" in CCTV program "Belt and Road" of "Homeland, Dreamland"

25) The technology requires the welding **must** **[Engagement-Heterogloss: Expand-Entertain]** be done above minus 5 degrees centigrade. But how do we do the welding with a temperature of minus 30 degrees centigrade? Then we adopted a special method(sample E44: NFC- "The Belt and Road" of "Homeland, Dreamland"- episode 322).

26) The old tanks **must** **[Engagement-Heterogloss: Expand-Entertain]** be removed and replaced by the new tanks. That job was rather difficult. So what is its main function? It produces the green coke. As the raw material for our petroleum coke project, the green coke has established the production line for the entire enterprise. Previously it was the bottleneck. Now a chain has formed for production (sample E45: NFC- "The Belt and

Road” of “Homeland, Dreamland”- episode 322).

- 27) Back then construction **must** [Engagement-Heterogloss: Expand-Entertain] have been very difficult in winter. On the one hand, it was so cold that our workers couldn't even reach out their hands. And also look, that building is over 80 meters tall. Back then, the wind was very strong up there the temperature was minus 30 to 40 degrees centigrade (sample E46: NFC- “The Belt and Road” of “Homeland, Dreamland”- episode 322).

From the above “must” revealed in the program, we can see that they are applied to describe the detailed operation requirements, which has created many difficulties for the working staff, who have to bear the extreme coldness in order to get their tasks done in line with the requirements. Actually, as a modal word, “can” has the function of hedging, which will not contribute to produce positive effect in terms of working ethics of Chinese staff. While here based on the content further revealed in the examples, we can see that Chinese workers have done in line with the requirements with their due diligence. Therefore, it is possible for them to convince the outsiders that Chinese companies are responsible.

3. PDA Analysis of “will” in CCTV program “Belt and Road” of “Homeland, Dreamland”

- 28) As the training continues, this **will** [Engagement-Heterogloss: Expand-Entertainment] create jobs for 400 more people, and **will** [Engagement-Heterogloss: Expand-Entertainment] propel forward the technical capabilities of workers in Sri Lanka's energy field. This is a mark on everyone that **will** [Engagement-Heterogloss: Expand-Entertainment] last their entire lives (sample E47: China Machinery Engineering Corporation- “The Belt and Road” of “Homeland, Dreamland” episode 116).

- 29) In 2015, Pavlodar refinery started to be modernized, upgraded and reconstructed. It has been determined as the key project in the plan for industrialization of Kazakhstan. After it has been modernized,

reconstructed and expanded, the plant **will** [Engagement-Heterogloss: Expand-Entertainment] be able to process 7.5 million tonnes of crude oil every year(sample E48: NFC-“The Belt and Road” of “Homeland, Dreamland” -episode322).

- 30) The arrival of Chinese textile enterprises has majorly affected Tajikistan’s textile industry. We have brought in the world’s most advanced spinning equipment. All of our equipment is probably worth RMB 200 million. It has pushed Tajikistan’s spinning technology forward by at least 30 years. This place has top-of-the-line cotton, and by bringing in the world’s best equipment and the best management, we **will** [Engagement-Heterogloss: Expand-Entertainment] produce top-of-the-line products(sample E49: Zhongtai Textile Industrial Park- “The Belt and Road” of “Homeland, Dreamland” -episode312).

From the above examples, based on the “will” revealed, Chinese companies are justifying their current actions consisting of creating job opportunities for Sri Lankans, the key project they are engaged as well as bringing in the world’s best equipment and the best management to Tajikistan. By opening dialogic space, they created opportunities to align various stakeholders, especially the local government, who owns the most power of deciding the long-term development of Chinese companies in Tajikistan.

5.3.2.3 PDA Analysis of Attribution Resources in Companies’ Oversea CSR Report

- 31) The Kazak Minister of Energy and Mineral Resources **said**[Engagement-Heterogloss: Expand-Attribute] that it was a model of cooperation between the the two countries, and that the nation’s energy ties would continue to Guobao, then vice-chairman of China’s National Development and Reform Commission, told

the ceremony that the completion of the pipeline showed the huge potential and bright future for Sino-Kazakh cooperation(sample E50: CNPC, Kazakhstan 2008 sustainability report, page 4)

32) Wayne Swan, Australian Deputy Prime Minister and Treasurer, **said[Engagement-Heterogloss: Expand-Attribute]:** “By acquiring OZ Minerals Ltd, China Minmetals kept the jobs of nearly 2,000 Australians, which meets our principle of national interests.” (sample E51: Minmetals Australia Report, page 21)

33) During the construction of the Jabung LPG Plant, our adherence to the project design standards and budget greatly impressed the Indonesian government and stakeholders. The Indonesian Minister of Energy and Mining Resources praised the project, calling it “a pioneering work of large engineering projects of the past 10 years”...Then Indonesian President Megawati Sukarnoputri **said[Engagement-Heterogloss: Expand-Attribute]** “PetroChina’s entry into Indonesia is like a breath of fresh air in the energy market”(sample E52: CNPC Indonesia Report, page 4)

34) Aslan Musin, Deputy Prime Minister of Kazakhstan, attended the ceremony. In his speech, he praised CNPC for the importance its **said that CNPC had made an immense contribution to the development of the Aktobe region, and that it was his belief [Engagement-Heterogloss: Expand-Attribute]**that CNPC AktobeMunaiGas would have a vital role in building Kazakhstan into one of the world’s top 50 economies(sample E53, CNPC Kazakhstan report, page 9)

From the above Attribute resources, we can perceive that Chinese enterprise especially state-owned entities have played significant role in enhancing country relations, and more likely to be recognized and establish relations with the local governments. On the one hand, as state-owned enterprise, they are strongly responsible to act in line with domestic policies.

On the other hand, they are competent in real business practices since they have deeply rooted in local countries for many years. While since the “going-out” strategy will continue to deepen, there’s a trend to create new business modes to help more private companies to go out and base in oversea countries, to put it constructively, state-owned entities have not only played important roles in enhancing country relations but also in sharing resources and successful experience with Chinese private companies to grow together so as to realize common destiny.

5.3.2.4 PDA Analysis of Attribution Resources in CCTV Program

The following examples are extracted from the CCTV program the “Belt and Road” Initiative of “Homeland, Dreamland” so as to understand Chinese companies’ alignment of various stakeholders from another perspective.

35) He **said [Engagement-Heterogloss: Expand-Attribute]** that the Chinese employees work rigorously and diligently, and that they have persisted in their work here every day, very diligently and earnestly. So he **thinks [Engagement-Heterogloss: Expand-Attribute]** that Chinese workers have high professional quality and strong earnest work ethic (sample E54: Liugong Dressta Machinery-The “Belt and Road” of “Homeland, Dreamland”-episode 285).

36) He **said [Engagement-Heterogloss: Expand-Attribute]** that before, his impression of Chinese people was that we were very efficient when it comes to our work, but also passionate and very loud. But after his contact, he has found that Chinese workers have really given him a lot of help, and have worked diligently and earnestly, with great attention to detail(sample E55: China Machinery Engineering Corporation-The “Belt and Road” of “Homeland, Dreamland”-episode 116).

37) **According to Zhang Jianbin [Engagement-Heterogloss:**

Expand-Attribute], these methods are all valuable experiences of the front-line workers. It's precisely the adequate preparations and proper arrangements made by the Chinese enterprise in advance that have allowed the successful completion of the upgrading and construction project(sample E56: NFC-The "Belt and Road" of "Homeland, Dreamland"-episode 322).

Based on the above Attribution resources revealed from the program, we can have an understanding of the perceptions made by other parties in terms of Chinese companies' real performance. We can see that there is a wide spread recognition of their performance. Through their diligence, persistence, vigor, efficiency, friendliness, and profession, Chinese companies are making alignment in order to win support and trust. The positive effect can be concluded as Chinese companies will be recognized by more and more parties from other countries, establishing more and more harmonious relationships with them and playing a more and more active role in the new era.

CHAPTER VI CONCLUSION

The conclusion part first summaries the major findings in this study, then implications, limitations will be presented.

6.1 Major Findings of Present Thesis

Firstly, Chinese companies' have applied large numbers of Attitude and Engagement resources either in corporate CSR reports or in CCTV program, which play an important role in establishing good corporate images and polish corporate reputation so as to align various stakeholders. To put it more specific, to begin with, Chinese enterprises have applied a large number of Inclination resources to construct their Affect inclinations, the corporate Affect Chinese enterprises revealed is remaining true and committed to their original goals, constantly pursuing progress and keep realizing their missions for stakeholders. Besides, by applying a number of Judgment resources, Chinese enterprises, especially state-owned engineering, and oil chemical Chinese enterprises successfully constructed themselves as experts and authorities in the world arean. Finally, the Heterogloss resources help highlight the Chinese enterprises' merits and qualities as humility and inclusiveness. Moreover, by applying large numbers of modal words, Chinese enterprises justify their business practices and invade certain potential risks by making use of the ambiguity function of the modal expressions.

Second, through the discourse analyses, the positive influences of operation oversea drawn are as follows: First, Chinese enterprises, especially state-owned enterprises pay great attention to the significant stakeholders like local government, local community as well as the world organizations, in order to align such stakeholders, Chinese enterprises attach great importance to ensure their actions are in strict compliance with related laws and regulations. Second, Chinese enterprises actively brought in advanced skills and management expertise, focusing on training

local employees to improve their professional skills, which not only help solve the local employment problems, but also take actions to ensure their long term career development. Third, Chinese staff have shown strong commitment and sense of responsibility in the process of working overseas, they impressed the local partners with good qualities such as their commitment to tasks, great endurance of hardships and sacrifice, diligent and down-to earth working attitude. The Appraisal resources under Attitude system and Engagement system jointly contribute to make stakeholders concerned think positively of Chinese companies as well as China's "Belt and Road" Initiative.

6.2 Implications of the Study

The present study attempts to analyze the Attitude and Engagement resources in Chinese companies' oversea social responsibility reports and the CCTV program. It is motivated with the purpose of providing useful information for Business English learners, business entities and corporate managers. The thesis selects media reports as complement research data is considering the fact that media is a double-edged sword, if being properly applied, more positive energy can be transmitted in the society in a more effective way, and it works to contribute to more efficient management worldwide.

For Business English learners, the combination of business cases and linguistics is a novel perspective to learn Business English. On one hand, from realistic perspective, linguistic theories provide useful methodology to have a deep understanding of business language so as to generate useful information for users concerned. On the other hand, from the theoretical perspective, the combination of business cases and linguistics to some extent expand and integrate the practical and theoretical Business English learning.

For Chinese business entities, it enlightens them to make advantages of social responsibility disclosure in the current stage. Apart from gaining legitimacy, they play significant roles in aligning stakeholders, which enables them to have better communication with the outsiders, keeps maintaining good interpersonal relationship and better constructs Chinese companies' oversea images.

For managers, it is obvious to enhance their effective management in real

oversea business practices since there is no one-fits-all way in realizing effective management especially in oversea situations, where culture, religious beliefs, customs and living habits are varied. Therefore, it is important for managers to pay more attention to not only the working efficiency but also aspects concerning business and staff personal qualities.

6.3 Limitations of the Study

Although a lot of efforts have been made to this study, there are still some limitations.

Firstly, as to the quantity and source of data, the target corpora contain 30 Chinese enterprises, and only those large state-owned Chinese enterprises disclose their oversea social responsibilities in the form of oversea CSR reports which limits the study corpora in reality.

Secondly, though the data amount is large, the subject Chinese companies concerned are mostly state-owned enterprises in China, lack of private companies.

Thirdly, the discussion of Attitude and Engagement resources distribution and analysis of changes of Attitude and Engagement resources contain writer's somewhat subjectivity even though the writer tries to keep personal judgment away. There are two roots of being subjective. On the one hand, the categorization of Appraisal theory is subjective, the system or category a word belongs to may change with the different linguistic fields as well as different social and cultural environment. On the other hand, the main functions of positive discourse analysis are design, alignment and reconciliation, with the construction of a more harmonious society as the core, therefore, the writer tries to construct positively, but due to limits of ability in understanding and knowledge, the whole analysis may not be so comprehensive, which the writer has tried to achieve.
